Assessments of conservation status at the European level (all biogeographical regions - EU25)

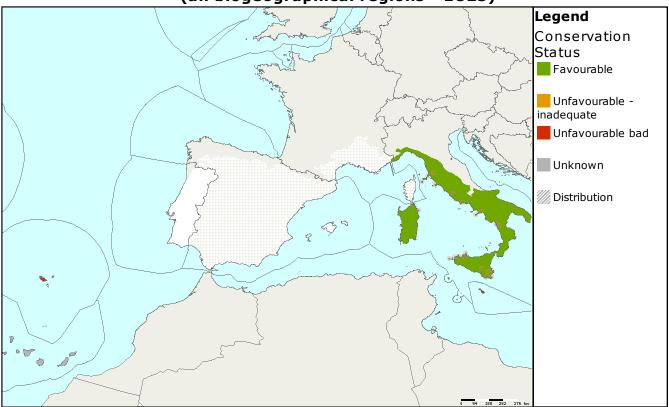

| MS | Region | | Conservation | Population | Population | | | |
|------|--------|-------|--------------|------------|---------------------|---------|------------------------|---------------------|
| | | Range | Population | Habitat | Future prospects | Overall | Population size & unit | Population Trend |
| EU25 | MAC | | | | | | > 18 grids | |
| EU25 | MED | | | | | | | |

A fern known from the south-western Europe, north-western Africa and Macaronesia. It occurs in various types of habitats like forests or rocks, mostly on the shaded and humid stands.

The reports provided for this species are incomplete. The conservation status was not assessed by Portugal. However, it is possible to conclude that the conservation status in the Mediterranean biogeographical regions is 'favourable' and in the Macaronesian 'unfavourable inadequate'.
