

Species name: **Athamanta cortiana**
Annex: **II, IV**

Species group: **Plants**
Regions: **MED**

Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	MED	Unfavourable - inadequate	Unfavourable - inadequate	Unknown	Unfavourable - inadequate	Unfavourable - inadequate	12 loc.	=

MED: The overall assessment is "unfavourable - inadequate". Stenoendemic species - endemic to the Apuan Alps, reported from 12 sites in Italy, stable population trend. IT evaluated range, population and future prospects as "unfavourable - inadequate", habitat as "unknown" and overall assessment as "unfavourable - inadequate", but improving.

**Assessments of conservation status as reported by Member states
(all biogeographical regions - EU25)**

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
IT	MED						12 - 12 loc.	=	2

Data quality is based on an assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at <http://biodiversity.eionet.europa.eu/article17>
