

Species name: **Campanula serrata**
Annex: **II*, IV**

Species group: **Plants**
Regions: **ALP**

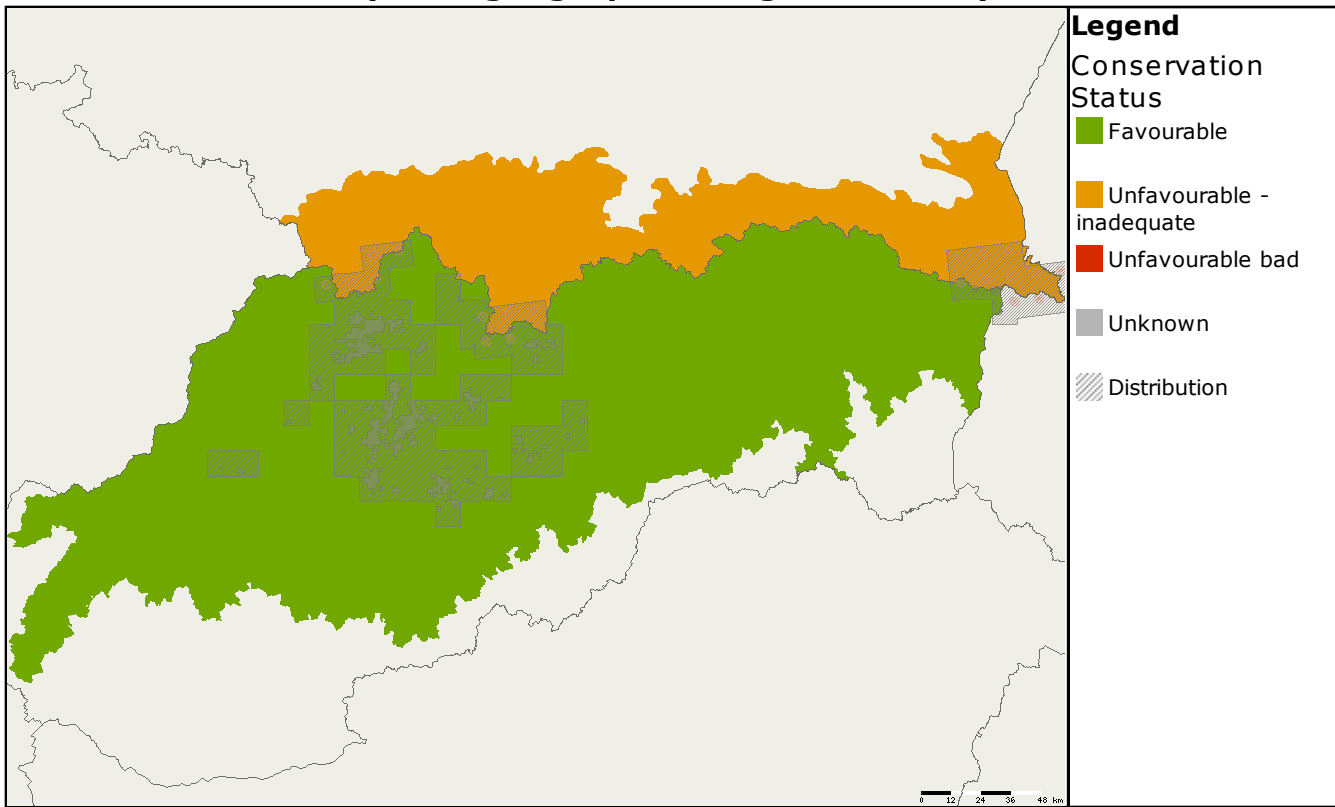

Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	ALP						83 grids	-

Campanula serrata is a flowering plant species present in the Carpathians in two main areas (Alpine biogeographical region). It is threatened by ceasing of grazing and by natural succession of alpine pastures. Poland reported all parameters as 'unfavourable-inadequate'. Since it covers slightly more than a quarter of the species' distribution, the 'favourable' status in Slovakia is insufficient and the overall assessment is 'unfavourable-inadequate'.

Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
PL	ALP						10000 - 10000 flowr.	-	2
SK	ALP						300 - 300 loc.	=	2

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at
