

Species name: **Centranthus trinervis**  
Annex: **II, IV**

Species group: **Plants**  
Regions: **MED**

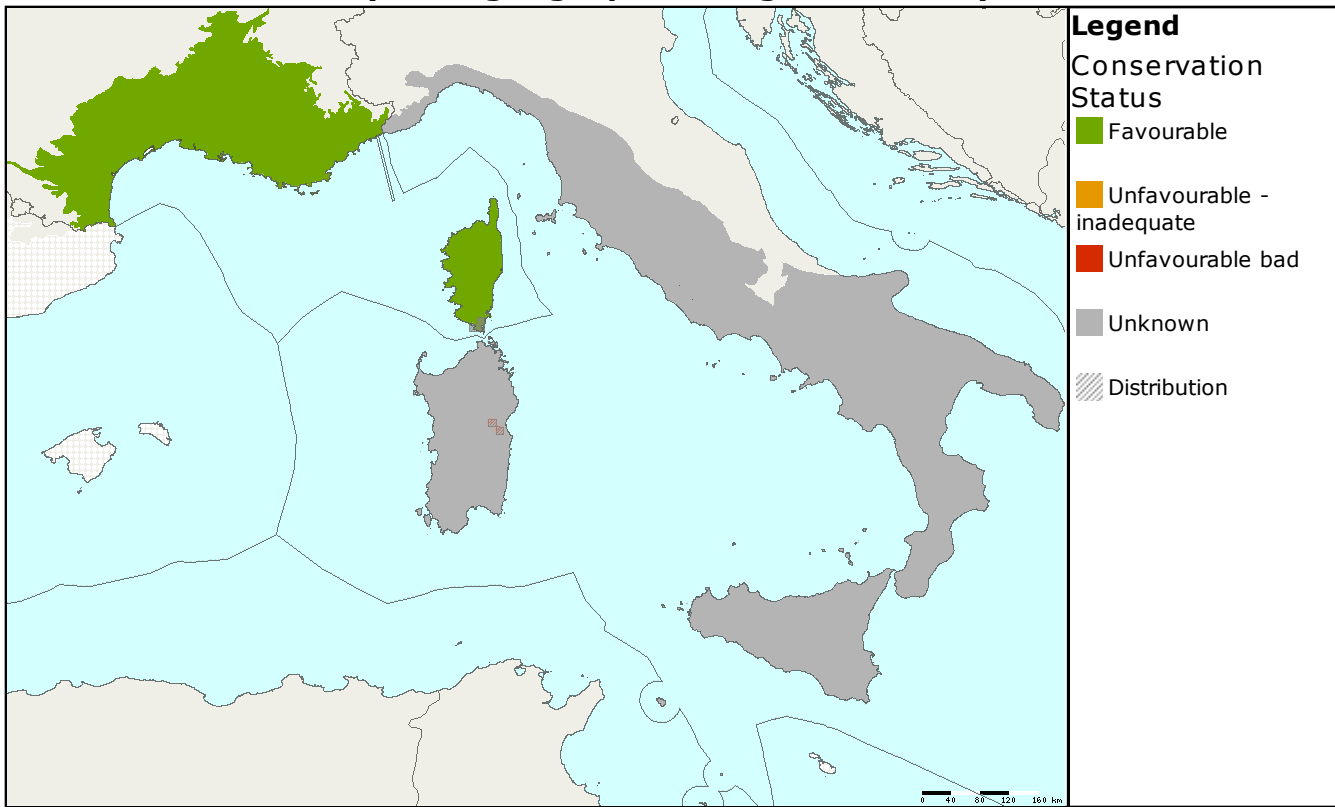

## Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	MED						155 indiv.	+

*Centranthus trinervis* is herbaceous species growing in the shade of rock crevices and along cliff terraces. It is endemic to Corsica (France) and Sardinia (Italy). Species is reported as 'favourable' in France but poorly known in Italy. Since Italy has approx. half of the population regional assessment is also 'unknown'. It is noted as rare and declining in the Italian Red Data Book. IUCN Red List and list of 50 of the most threatened plant species growing on Mediterranean islands both note that the species is endemic to Corsica and that the population in Italy is belonging to *Centranthus amazonum* species. According to IUCN the species is 'critically endangered'. Better information required

## Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
FR	MED						83 - 83 indiv.	+	1
IT	MED						72 - 72 indiv.	=	1

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at
