

Species name: **Cinna latifolia**
Annex: **II, IV**

Species group: **Plants**
Regions: **BOR**

Assessments of conservation status at the European level (all biogeographical regions - EU25)

| MS | Region | Conservation status assessment | | | | | Population size & unit | Population Trend |
|------|--------|--------------------------------|------------|---------|------------------|---------|------------------------|------------------|
| | | Range | Population | Habitat | Future prospects | Overall | | |
| EU25 | BOR | | | | | | 139 grids | = |

The drooping wood reed (*Cinna latifolia*) is a perennial plant occurring in Boreal biogeographical region of Europe, mostly in Finland and Sweden. It is also quite common in North America. It grows in moist woods, meadows and stream banks. Overall conclusion for its conservation status is 'unfavourable-inadequate' due to such status in all of the country reports (Finland, Sweden, Estonia and Latvia). Only the range is reported 'favourable' from all countries.

**Assessments of conservation status as reported by Member states
(all biogeographical regions - EU25)**

| MS | Region | Conservation status assessment | | | | | Size&unit | Population trend | Data quality |
|----|--------|--------------------------------|------------|---------|------------------|---------|------------------------|------------------|--------------|
| | | Range | Population | Habitat | Future prospects | Overall | | | |
| EE | BOR | | | | | | 600 - 700 tufts | = | 1 |
| FI | BOR | | | | | | 75000 - (75000) flowr. | = | 2 |
| LV | BOR | | | | | | 20 - 20 loc. | = | 2 |
| SE | BOR | | | | | | 30000 - 30000 flowr. | = | 1 |

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at
