

Species name: **Colchicum arenarium**  
Annex: **II, IV**

Species group: **Plants**  
Regions: **PAN**

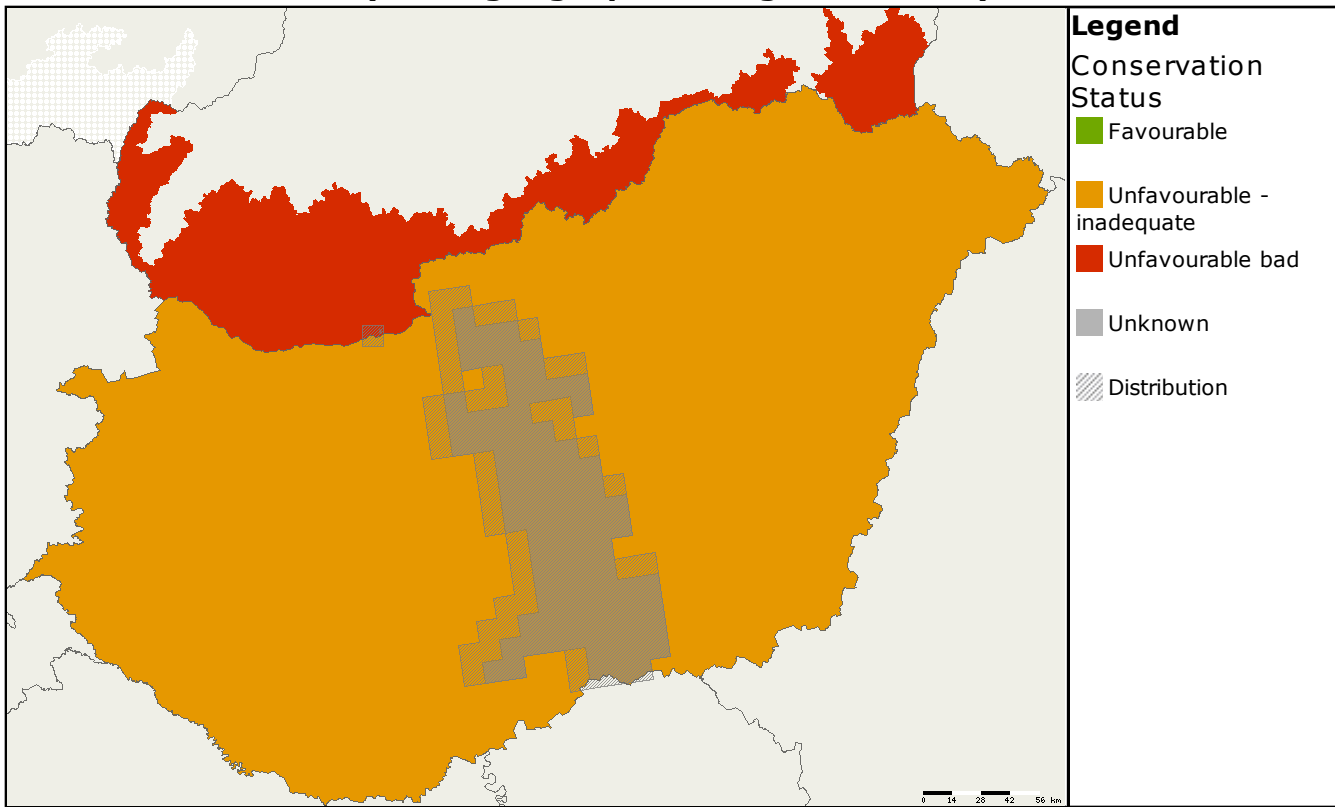

## Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	PAN						129 grids	

*Colchicum arenarium* is a flowering plant species of sandy grasslands. Major threats: abandonment of pastoral systems, artificial planting, roads, motorways, drying out / accumulation of organic material, invasion by a species, forestry clearance. It is reported from Pannonian region by Hungary and Slovakia. The overall assessment 'unfavourable-inadequate' is affected mostly by the Hungarian report. The Slovakian assessment is rather negative but has minor impact.

## Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
HU	PAN						5000000 - 8300000 indiv.	-	2
SK	PAN						1 - 3 loc.	+	1

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at
