

Habitats Directive Article 17 Reporting

Species group: **Plants** Regions: **CON MED** 

European Environment Agency

Assessments of conservation status at the European level (all biogeographical regions - EU25)

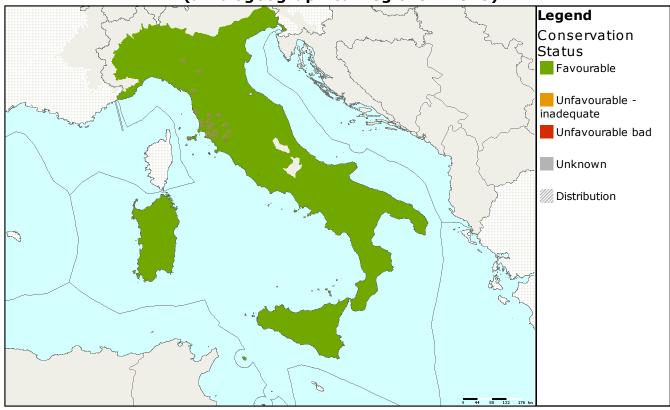

MS	Region		Conservatio	Deputation	Dopulation			
		Range	Population	Habitat	Future prospects	Overall	Population size & unit	Trend
EU25	CON						3 loc.	=
EU25	MED						18 loc.	=

The centre of the distribution of *Crocus etruscus*, an Italian endemic plant species is in the Tuscany region in western Italy. Its natural range extends towards the northern part of Apennines. It grows preferably in the shrub formations and dry heaths of the Mediterranean mountains.

The conservation status is 'favourable' in both Continental and Mediterranean biogeographical regions, range and population sizes are stable. No major pressures to the species or its habitat were recorded.

## Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Region		Conservatior			Dopulation	Data		
		Range	Population	Habitat	Future prospects	Overall	Size&unit	Population trend	Data quality
IT	CON						3 - 3 loc.	=	2
IT	MED						18 - 18 loc.	=	2

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006.
