

Species name: **Cynodontium suecicum**
Annex: **II**

Species group: **Plants**
Regions: **ALP BOR**

Assessments of conservation status at the European level (all biogeographical regions - EU25)

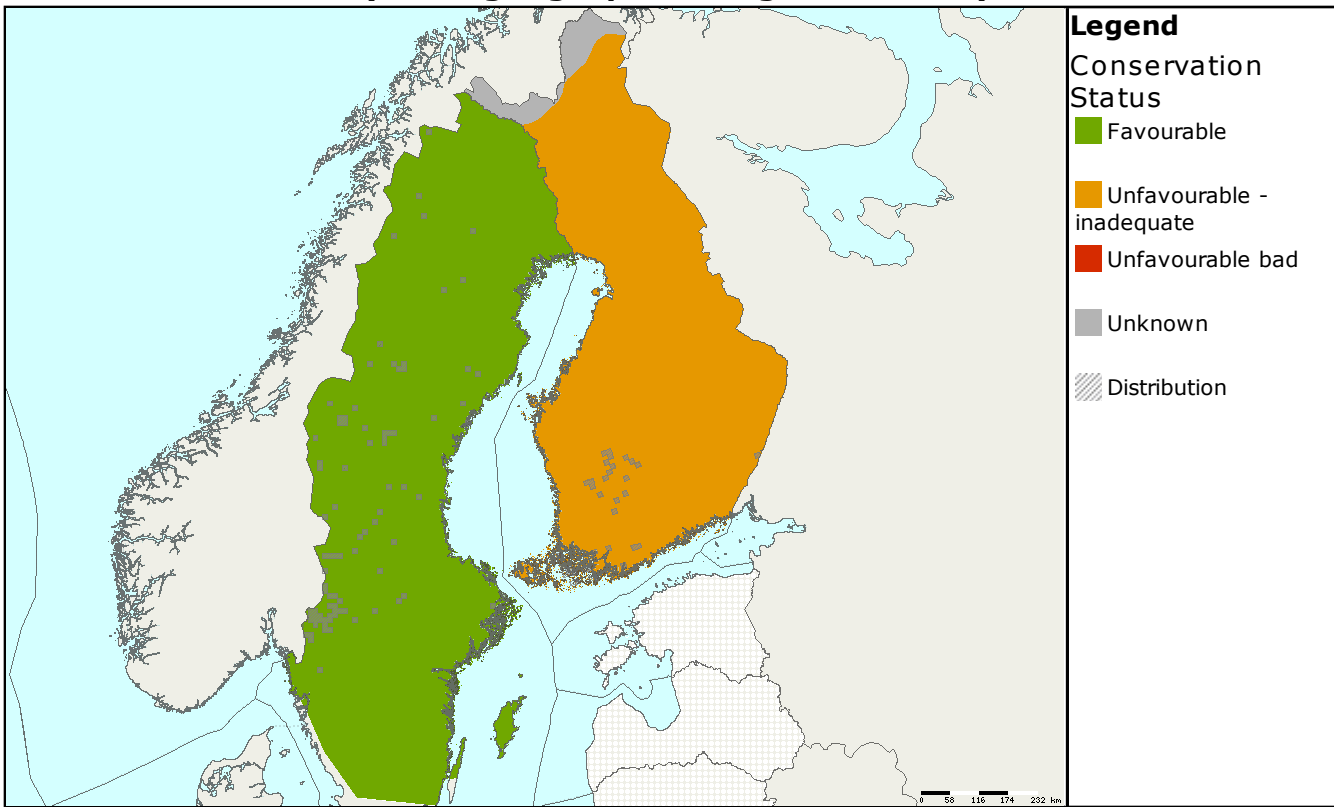

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	BOR						115 grids	
EU25	ALP						>12 loc.	

A moss species occurring in the Northern Europe. It is known from Norway, Sweden, Finland and Russia. It grows on shaded siliceous rocks and cliffs and on humid stands in undergrowth of coniferous forests.

The conservation status in the Alpine biogeographical region, where the species occurs mainly in Sweden is 'favourable'. In the Boreal biogeographical region the species is in 'unfavourable inadequate' conservation status. The population size is not sufficient to ensure a long-term viability and the area of habitat is decreasing. Species is threatened by inappropriate forestry practices. It is listed in the European Red List of Bryophytes in the category 'near threatened'.

Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
FI	ALP						- 2 loc.	X	3
SE	ALP						15 - 15 grids	=	2
FI	BOR						36 - 200 loc.	X	2
SE	BOR						100 - 100 grids	=	2

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at <http://biodiversity.eionet.europa.eu/article17>
