

Species name: **Dianthus lumnitzeri**
Annex: **II*, IV**

Species group: **Plants**
Regions: **ALP PAN**

Assessments of conservation status at the European level (all biogeographical regions - EU25)

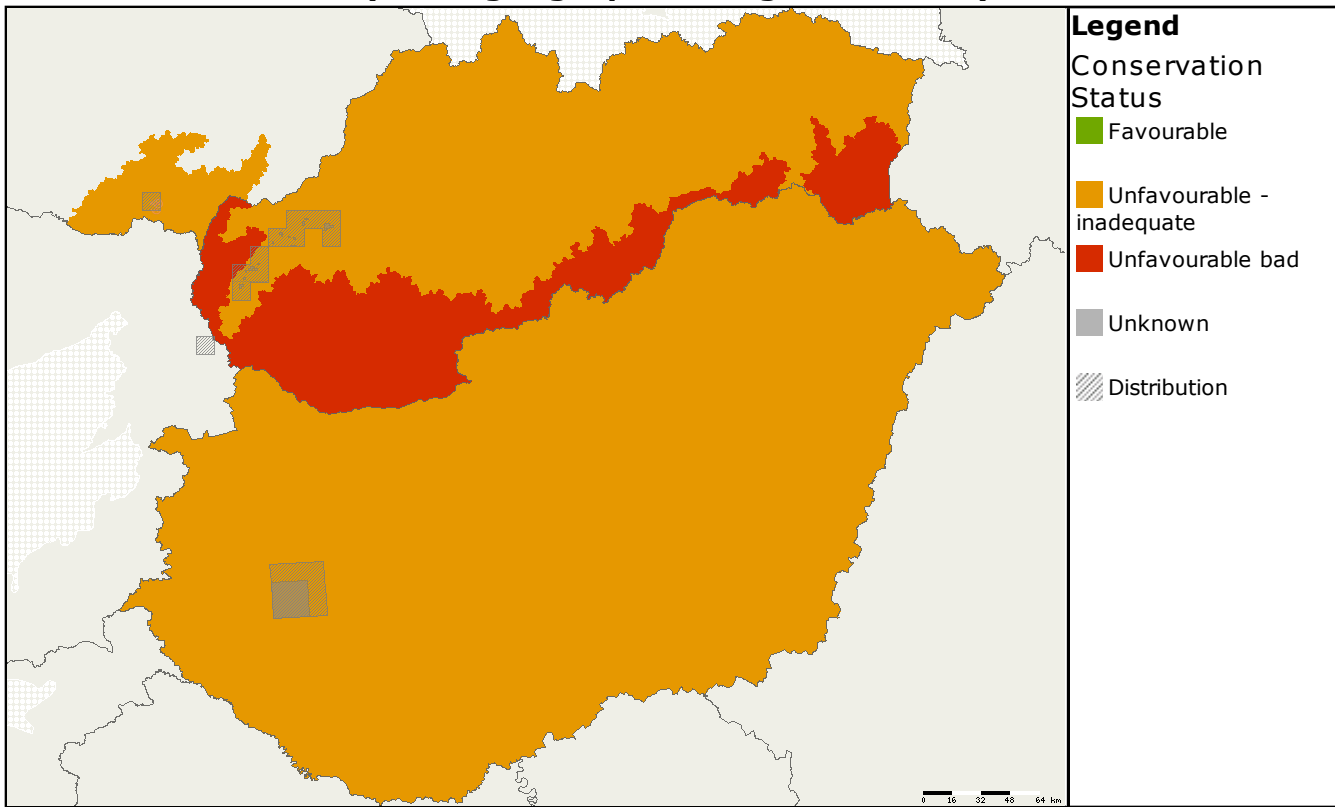

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	ALP	Unfavourable - inadequate	Favourable	Unfavourable - inadequate	Unfavourable - inadequate	Unfavourable - inadequate	10000 - 30000 tufts	=
EU25	PAN	Unfavourable - inadequate	Unfavourable bad	Unfavourable - inadequate	Unknown	Unfavourable bad	21 grids	-

A Praecarpathian endemic plant species reported from Czech Republic, Slovakia and Hungary. It occurs as well in Lower Austria. It grows on calcareous rocks, rocky cliffs or in dry grasslands on rocky slopes and shallow skeletal soils.

The conservation status in the Alpine biogeographical region, where the species was reported only by Slovakia is 'unfavourable inadequate', range area and habitat area are decreasing. In the Pannonian biogeographical region the status is 'unfavourable bad' which is influenced by decrease of the size of the Pannonian populations in Slovakia.

**Assessments of conservation status as reported by Member states
(all biogeographical regions - EU25)**

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
SK	ALP	Orange	Green	Orange	Orange	Orange	10000 - 30000 tuffs	=	1
CZ	PAN	Green	Green	Orange	Orange	Orange	7 - 7 loc.	=	1
HU	PAN	Green	Green	Orange	Grey	Orange	500 - 10000 indiv.	=	2
SK	PAN	Orange	Red	Orange	Orange	Red	100 - 200 tuffs	-	1

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at <http://biodiversity.eionet.europa.eu/article17>
