

Species name: **Dichelyma capillaceum**
Annex: **II**

Species group: **Plants**
Regions: **ATL BOR CON**

Assessments of conservation status at the European level (all biogeographical regions - EU25)

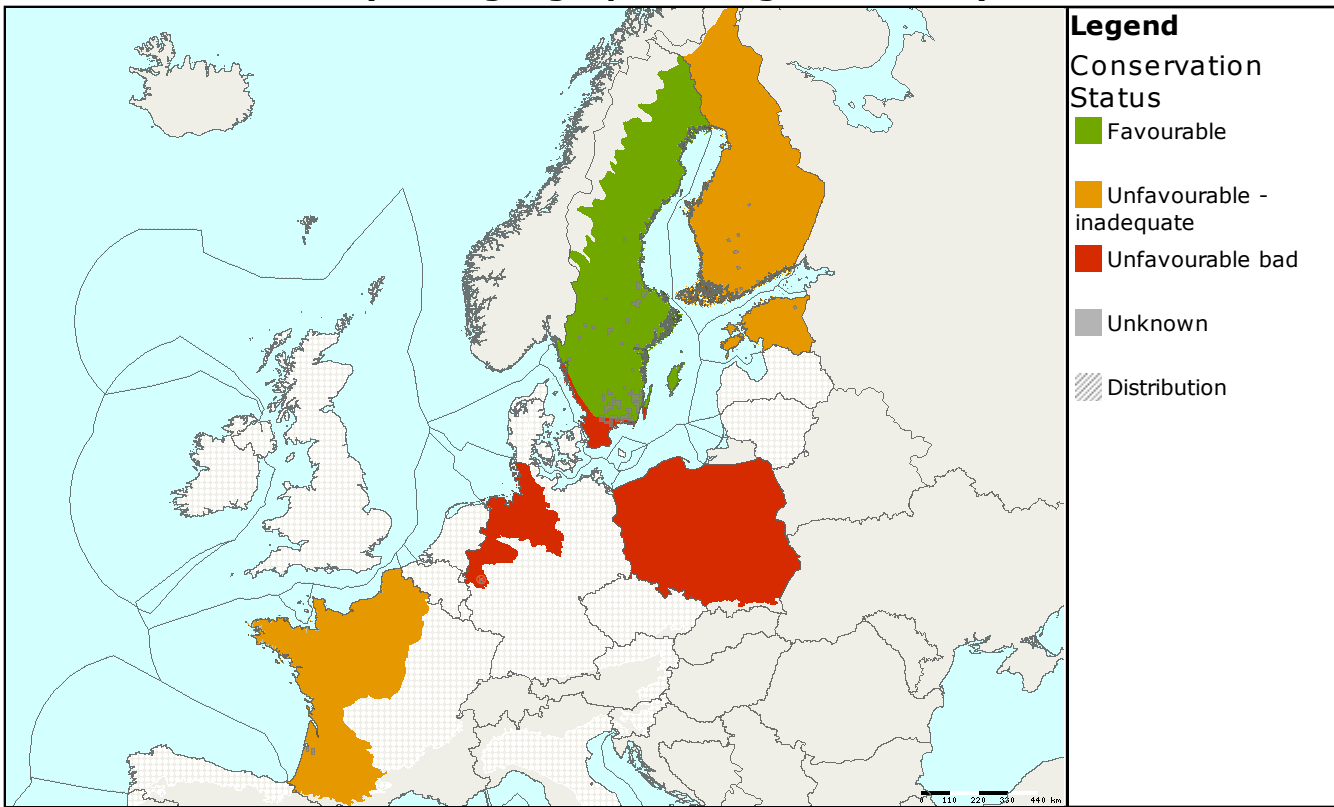

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	ATL	Green	Green	Green	Orange	Orange	5 grids	
EU25	BOR	Green	Green	Green	Green	Green	98 grids	
EU25	CON	Orange	Red	Green	Green	Red		=

The *Dichelyma capillaceum* is a moss species which occurs in several European countries.

In the Atlantic region the occurrence of this species is limited to small areas. The overall assessment is 'inadequate'. In the Boreal region it was assessed as 'favourable'. Of all countries Sweden is by far the most important country in terms of suitable habitat. In Sweden this species has a 'favourable' status. In the Continental region it is assessed as 'bad', mainly due to the Polish assessment (where it probably has become extinct).

Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
DE	ATL						1 - (1) loc.	X	1
FR	ATL						N/A x	=	3
EE	BOR						1 - 1 loc.	=	1
FI	BOR						13 - 50 loc.	X	2
SE	BOR						132 - 132 grids	=	2
SE	CON						23 - 23 grids	=	2
PL	CON						N/A loc.	-	3

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at <http://biodiversity.eionet.europa.eu/article17>
