

Species name: **Dracaena draco**  
Annex: **IV**

Species group: **Plants**  
Regions: **MAC**

## Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	MAC						2 N grids	

The Canary Island dragon tree is endemic to Canary Islands (Spain), Madeira (Portugal) and Cape Verde (Macaronesian biogeographical region). Pressures and threats are linked to overgrazing. There are some missing reference values from Spain but overall assessment is clearly 'unfavourable-bad', same as in both countries. Action is required! It is classified as 'vulnerable' in IUCN Red List.

**Assessments of conservation status as reported by Member states  
(all biogeographical regions - EU25)**

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
ES	MAC						697 - (697) indiv.	X	1
PT	MAC						5 - 5 loc.	-	1

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at
