Habitats Directive Article 17 Reporting

Species name: Drepanocladus vernicosus Species group: Plants

Annex: II Regions: ALP ATL BOR CON MED

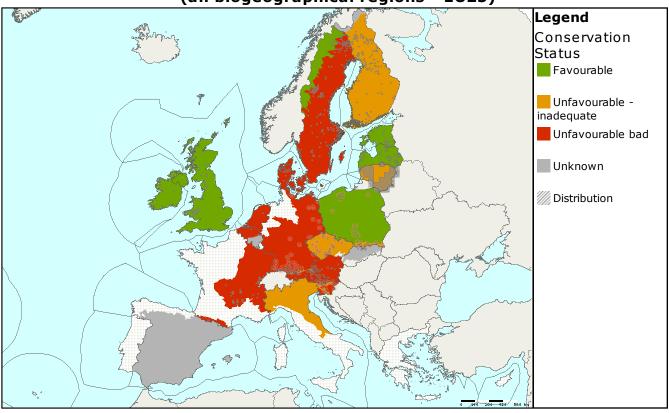

Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region		Conservation	Population	Population			
		Range	Population	Habitat	Future prospects	Overall	size & unit	Trend
EU25	BOR						969 grids	-
EU25	MED						1 loc.	=
EU25	ATL						66 grids	
EU25	ALP							
EU25	CON						>237 grids	

The slender green feather moss (*Drepanocladus vernicosus*) is a species which is widely distributed across Europe. It is usually found on open, wet, rough pastures. In every geographical region the status of this species is different. The overall statuses were assessed as follows: Alpine: 'impossible to be assessed'; Atlantic: 'favourable'; Boreal: 'inadequate'; Continental: 'bad'; and Mediterranean: 'unknown'. There is high variety between the different assessments and therefore it remains difficult do draw one overall conclusion. Lacking data from Spain could slightly improve the assessment.

Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)
