

Species name: **Echinodium spinosum**
Annex: **II***

Species group: **Plants**
Regions: **MAC**

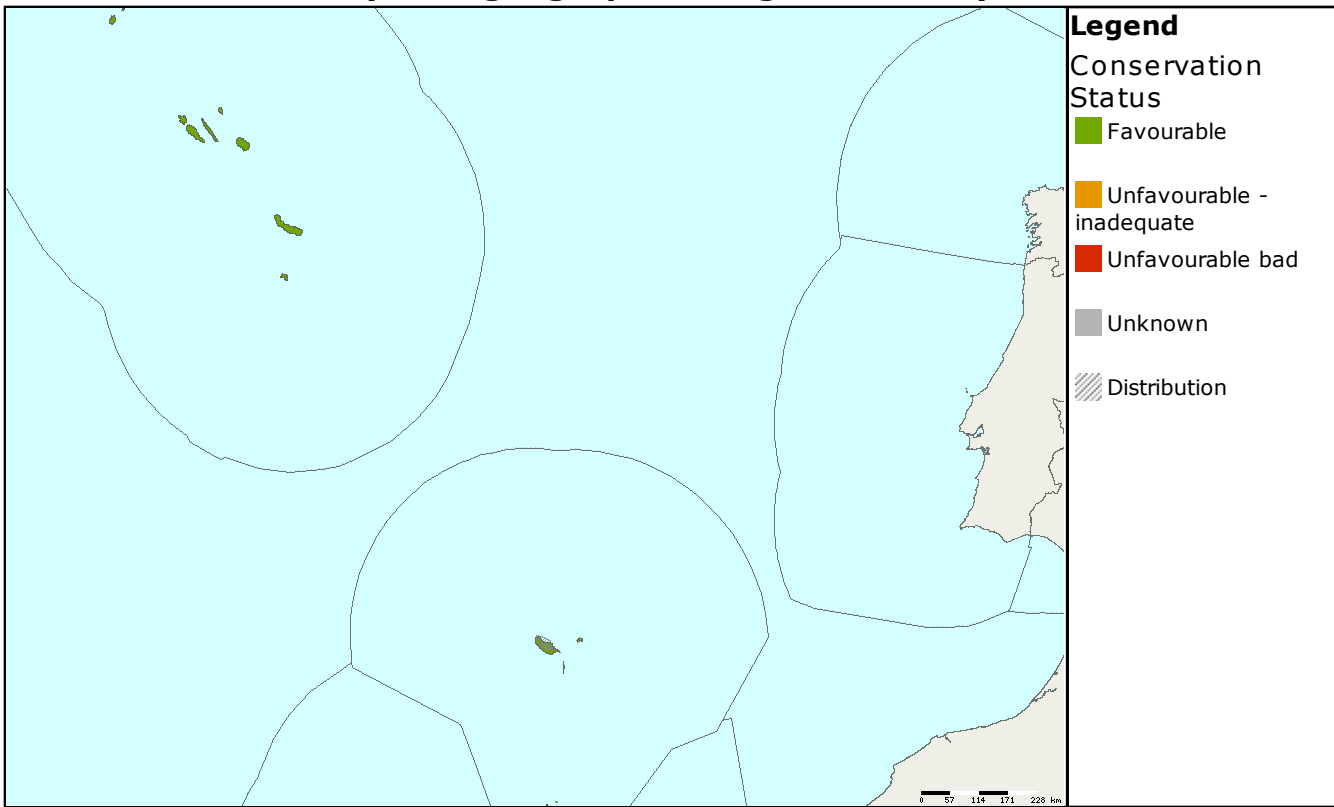

Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	MAC						> 6 grids	

Echinodium spinosum is a moss endemic to La Palma (Spain) and Madeira (Portugal). It is assessed as 'favourable' for Macaronesian region although there is relatively little information from Spain and 'unknown' may be more accurate assessment. It is classified as 'critically endangered' in 'Libro Rojo de la Flora Canaria contenida en la Directiva-Hábitats Europea'(1999) and 'endangered' in Red data book of European Bryophytes.

Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
ES	MAC						N/A indiv.	X	
PT	MAC						35 - (35) loc.	=	2

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at
