Assessments of conservation status at the European level (all biogeographical regions - EU25)

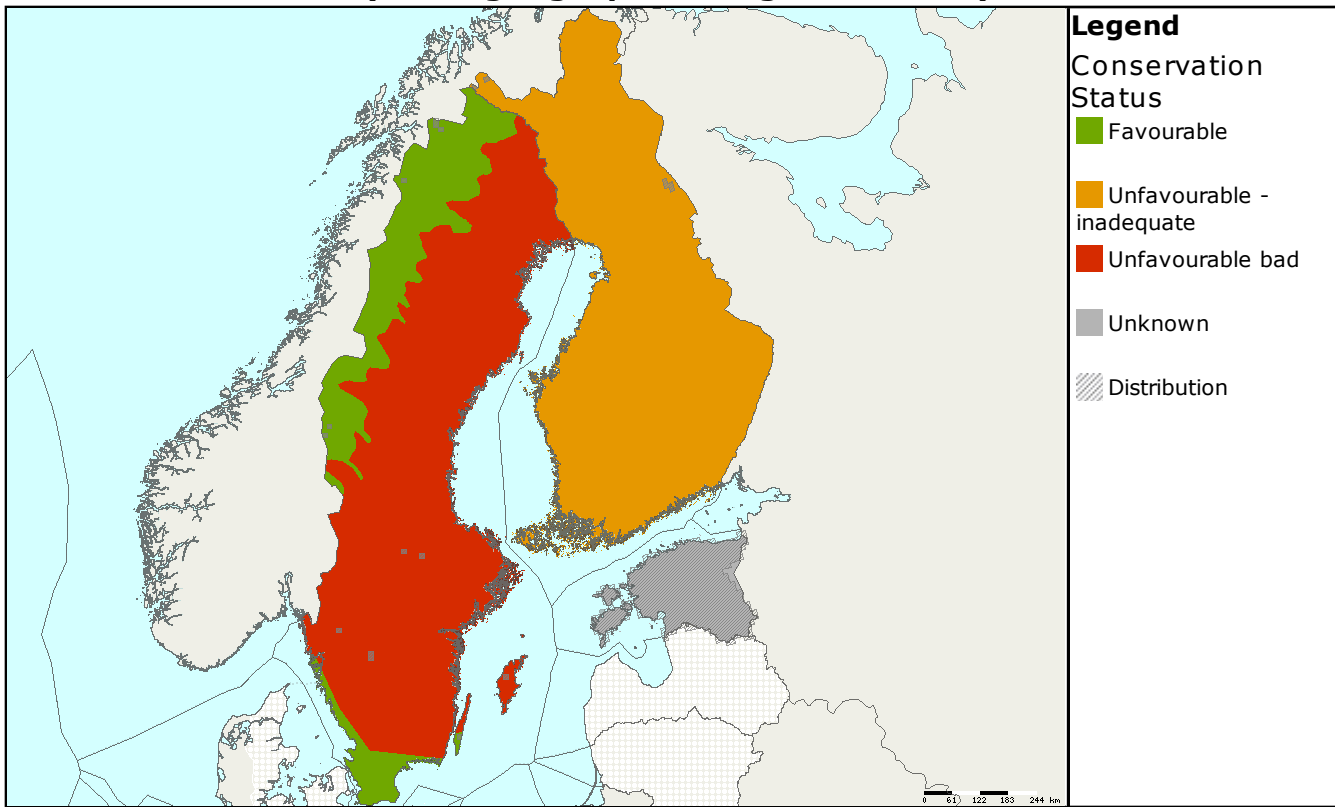

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	ALP						7 grids	
EU25	BOR						506 grids	
EU25	CON							=

Encalypta mutica is a tiny moss species which occurs in Estonia, Finland and Sweden. It grows on bare soils and rocks.

In the Alpine and Continental region the status of this species is assessed as ‘favourable’. However, the most important part of this species’ habitat lies in the Boreal zone for which the overall status was assessed as ‘unknown’. This is due to the Estonian assessment which is ‘unknown’. However, the largest part of the habitat of this species lies in Sweden where it has been assessed as ‘bad’ for the part that lies in the Boreal zone. In addition to this the assessment of Finland (‘inadequate’) raises the question whether or not this species is actually doing well.

Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
FI	ALP						2 - (2) loc.	X	1
SE	ALP						10 - 10 grids	=	2
EE	BOR						5 - 5 loc.	X	1
FI	BOR						4 - (4) loc.	=	2
SE	BOR						6 - 6 grids	=	2
SE	CON						1 - 1 grids	=	1

Data quality is based on an assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at <http://biodiversity.eionet.europa.eu/article17>
