

Species name: **Eryngium viviparum**
Annex: **II*, IV**

Species group: **Plants**
Regions: **ATL MED**

Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	ATL						11 grids	
EU25	MED						7 - 9 loc.	X

A plant species with eu-atlantic distribution occurring in North-western part of Iberian Peninsula and in the Massive Amrroicaine in France. It is a small amphibian species of seasonally flooded banks of shallow oligotrophic lakes on sandy substrate.

The conservation status in both the Atlantic and the Mediterranean biogeographical regions is 'unknown'. The reports provided by Portugal and Spain are incomplete. The conservation status in France is 'unfavourable bad'. The species was lost from several historical localities and its survival is dependant on the management measures. Species is extinct in the Portuguese Atlantic biogeographical region and the population in the Mediterranean region is as well threatened by extinction. In Spain the species is redlisted as 'endangered' mainly due to the lost of habitats, which is often a result of various human activities.

Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
ES	ATL						10 - 10 loc.	-	1
FR	ATL						10000 - 10000 x	+	1
ES	MED						6 - 8 loc.	X	1
PT	MED						1 - (1) loc.	X	3

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at <http://biodiversity.eionet.europa.eu/article17>
