

Species name: **Gypsophila papillosa**
Annex: **II*, IV**

Species group: **Plants**
Regions: **ALP**

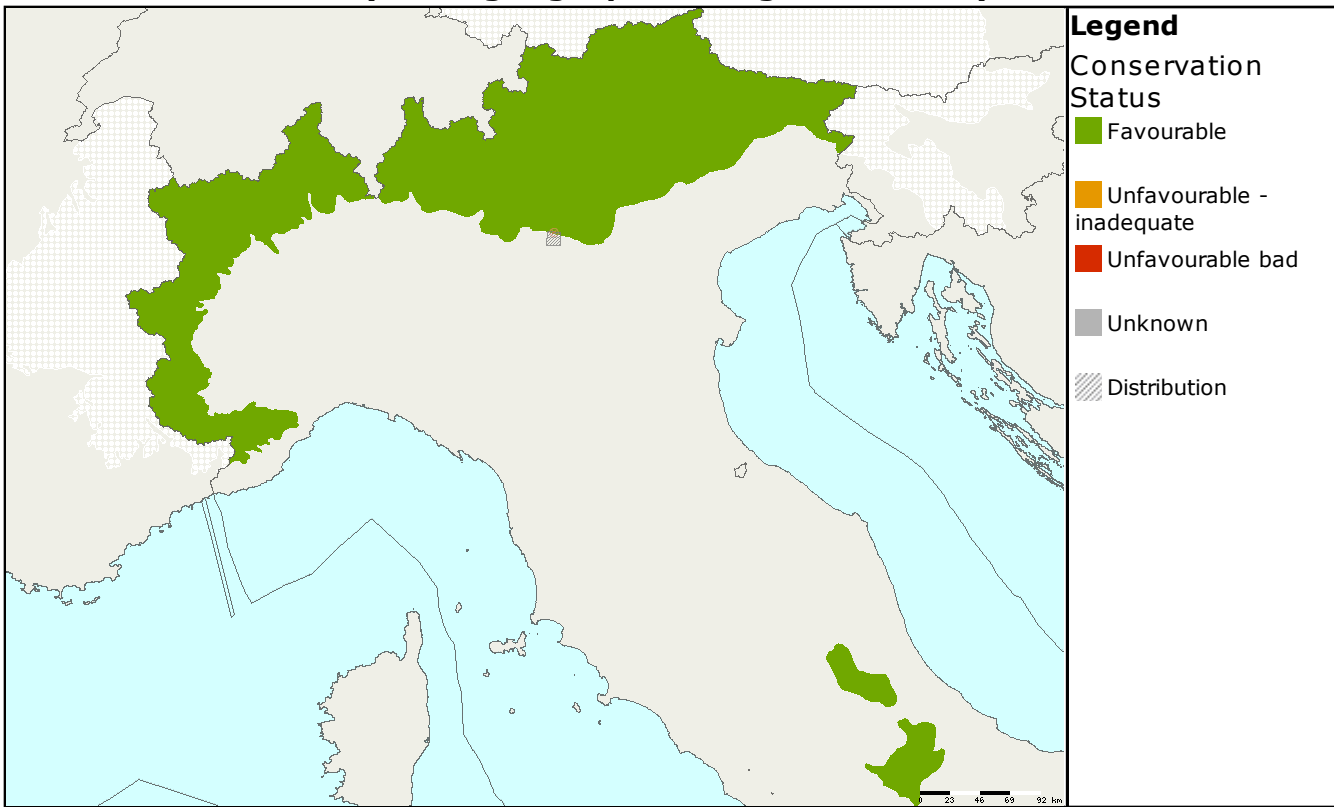

Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	ALP						3000 indiv.	+

ALP: Endemic to a small area near Lago de Garda at the southern edge of the Alps, Italy
Habitats include 8120 - Calcareous & calcshist screes of montane to alpine levels (Thlaspietea rotundifolii) which has been assessed as favourable both for Italy and the region

**Assessments of conservation status as reported by Member states
(all biogeographical regions - EU25)**

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
IT	ALP						3000 - 3000 indiv.	+	1

Data quality is based on an assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at <http://biodiversity.eionet.europa.eu/article17>
