

Species name: **Herzogiella turfacea**
Annex: **II**

Species group: **Plants**
Regions: **BOR**

Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	BOR						154 grids	-

Herzogiella turfacea is a moss species from Boreal biogeographical region. Major threats: general forestry management, reclamation of land from sea, estuary or marsh, drying out. Despite of positive Swedish assessment (all 'favourable'), the final assessment is influenced by Finnish report which is 'unfavourable-inadequate' for all parameters. Overall conclusion is 'unfavourable-inadequate' as well.

Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
FI	BOR						84 - (84) loc.	-	2
SE	BOR						150 - 150 grids	=	2

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at
