

Species name: **Hippuris tetraphylla**  
Annex: **II, IV**

Species group: **Plants**  
Regions: **BOR**

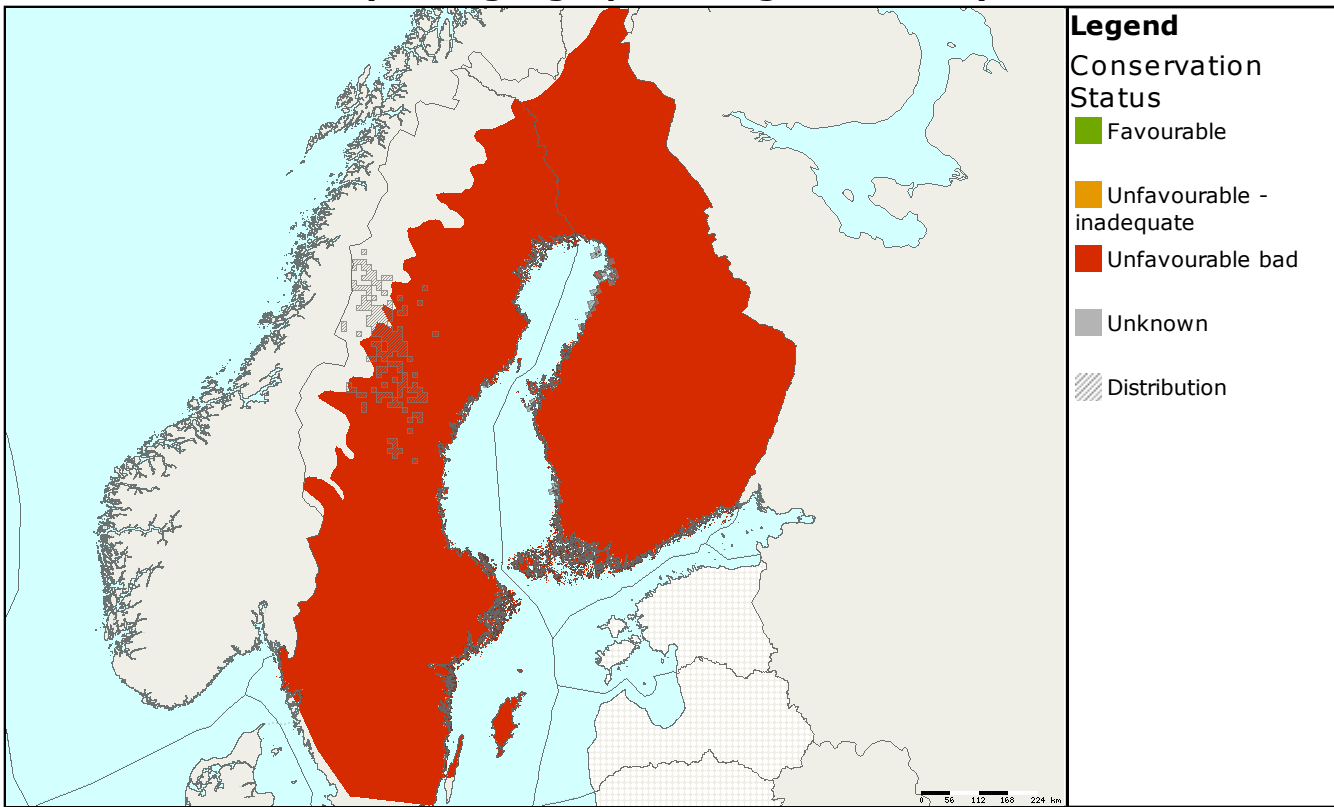

## Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	BOR						74 grids	x

*Hippuris tetraphylla* is a perennial aquatic plant with circumpolar distribution. Only found along coasts of the gulf of Bosnia within the EU (Boreal region), but also in Russia and North American Arctic. Historically the species had a much larger distribution, occurring along most of the Finnish coast. Pressures include eutrophication of the sea resulting in increased growth of other species. It is listed as 'critically endangered' in Swedish Red Data Book. Its conservation status is assessed as 'unfavourable-inadequate'. Action required if the species is to survive!

## Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
FI	BOR						110 - (110) loc.	X	3
SE	BOR						15000 - 15000 shoots	=	1

Data quality is based on an assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at
