

Species name: **Iris lusitanica**  
Annex: **V**

Species group: **Plants**  
Regions: **MED**

## Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	MED						> 21 grids	

*Iris lusitanica* is a flowering plant reported from the central part of the western Portugal and western Spain as a Lusitanian endemic species (Mediterranean region). Almost no data reported from Spain and very scarce data from Portugal (e.g. poor future prospects) do not allow different overall conclusion than 'unknown'.

## Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
ES	MED						N/A x	N/A	
PT	MED						N/A x	X	

Data quality is based on an assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at
