Habitats Directive Article 17 Reporting

Species name: Ligularia sibirica Species group: Plants
Annex: II, IV Species group: Plants
Regions: ALP BOR CON

Assessments of conservation status at the European level (all biogeographical regions - EU25)

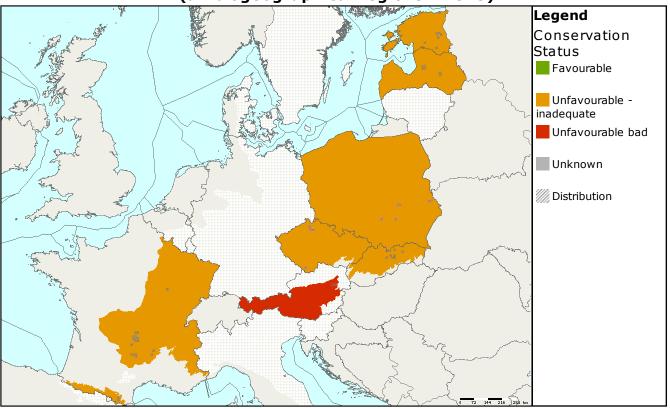

MS	Region		Conservatio	Donulation	Donulation			
		Range	Population	Habitat	Future prospects	Overall	Population size & unit	Population Trend
EU25	BOR						13 grids	
EU25	ALP						15 grids	Х
EU25	CON						28 grids	Х

The *Ligularia sibirica* is a plant species which occurs in a variety of wetlands such as humid grasslands, alkaline mires and alluvial woodlands ranging from the French Pyrenees to the Baltic States and Russia.

In the Alpine region the status of this species was assessed as unfavourable 'bad', mainly due to its status in Austria. In the other countries of the Alpine region its status is unfavourable 'inadequate'. In the Boreal and Continental region its status was assessed as unfavourable 'inadequate'. Threats and pressures are mostly linked to habitat change caused by changing grazing regimes or drainage of wetlands. This has already led to extinction of this species in some regions.

Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Region		nservation				Population	Data	
		Range	Population	Habitat	Future prospects	Overall	Size&unit	Population trend	quality
AT	ALP						800 - 1000 indiv.	-	2
FR	ALP						5 - 5 loc.	=	2
PL	ALP						55 - 55 indiv.	Χ	1
SK	ALP						23 - 23 loc.	=	1
EE	BOR						1700 - 1800 indiv.	-	1
LV	BOR						2 - 2 loc.	+	2
CZ	CON						40000 - 40000 tuffs	X	1
FR	CON						34 - 42 loc.	=	1
PL	CON						5000 - 6000 indiv.	=	1

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at http://biodiversity.eionet.europa.eu/article17
