

Species name: **Linaria flava**
Annex: **II, IV**

Species group: **Plants**
Regions: **MED**

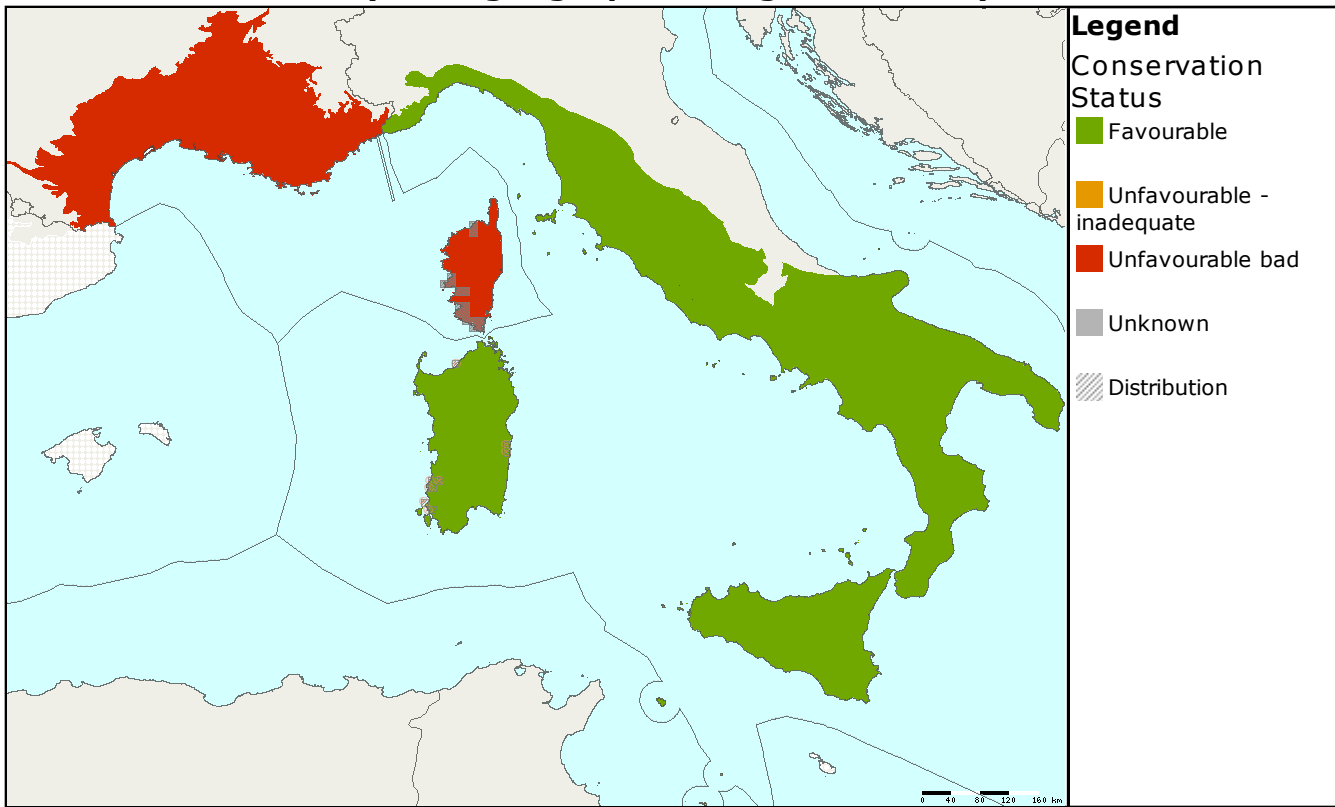

Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	MED						24 grids	=

Linaria flava is a plant species reported from Mediterranean region by France and Italy (islands of Corsica and Sardinia). Major threats: erosion, motorised vehicles, continuous urbanisation, leisure and tourism impacts. Despite of prevailing 'favourable' values, the decisive factor for the 'unfavourable-bad' overall assessment is rather negative assessment of habitat and future prospects parameters in French report. Italian report is 'favourable'.

Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
FR	MED						10000 - 10000 indiv.	=	1
IT	MED						11 - 11 loc.	=	2

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at
