

Species name: **Euphrasia marchesettii**
Annex: **II, IV**

Species group: **Plants**
Regions: **CON**

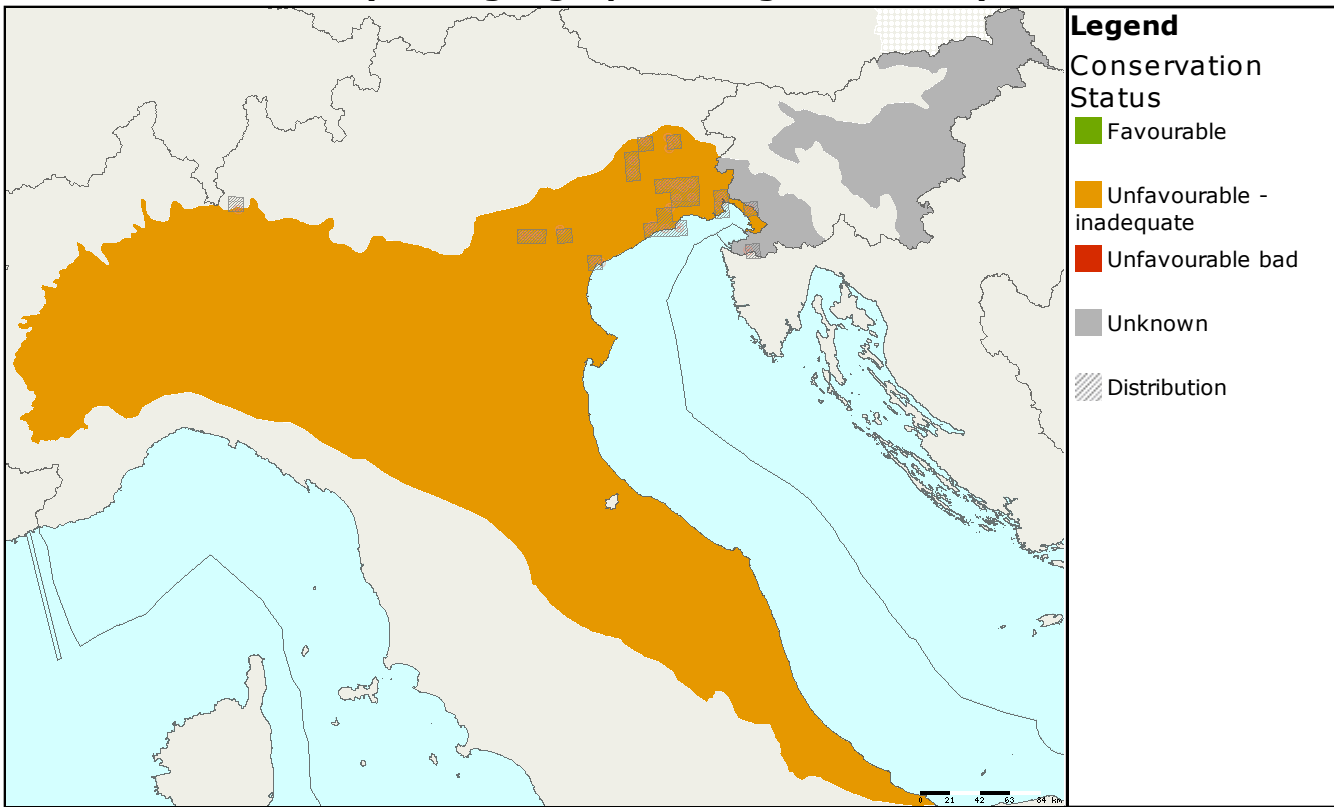

Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	CON						33 loc.	

Euphrasia marchesettii is a flowering plant occurring in South-east Europe. It is reported from Continental region by Italy and Slovenia. Major threats: landfill, land reclamation and drying out, drainage, modification of cultivation practices. Regional assessment is 'unfavourable-inadequate', affected mostly by the Italian report. The Slovenian assessment is 'unknown' in all parameters, but has less impact.

**Assessments of conservation status as reported by Member states
(all biogeographical regions - EU25)**

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
IT	CON						32 - 32 loc.	=	2
SI	CON						1 - (1) loc.	X	3

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at
