

Species name: **Moehringia lateriflora**  
Annex: **II, IV**

Species group: **Plants**  
Regions: **BOR**

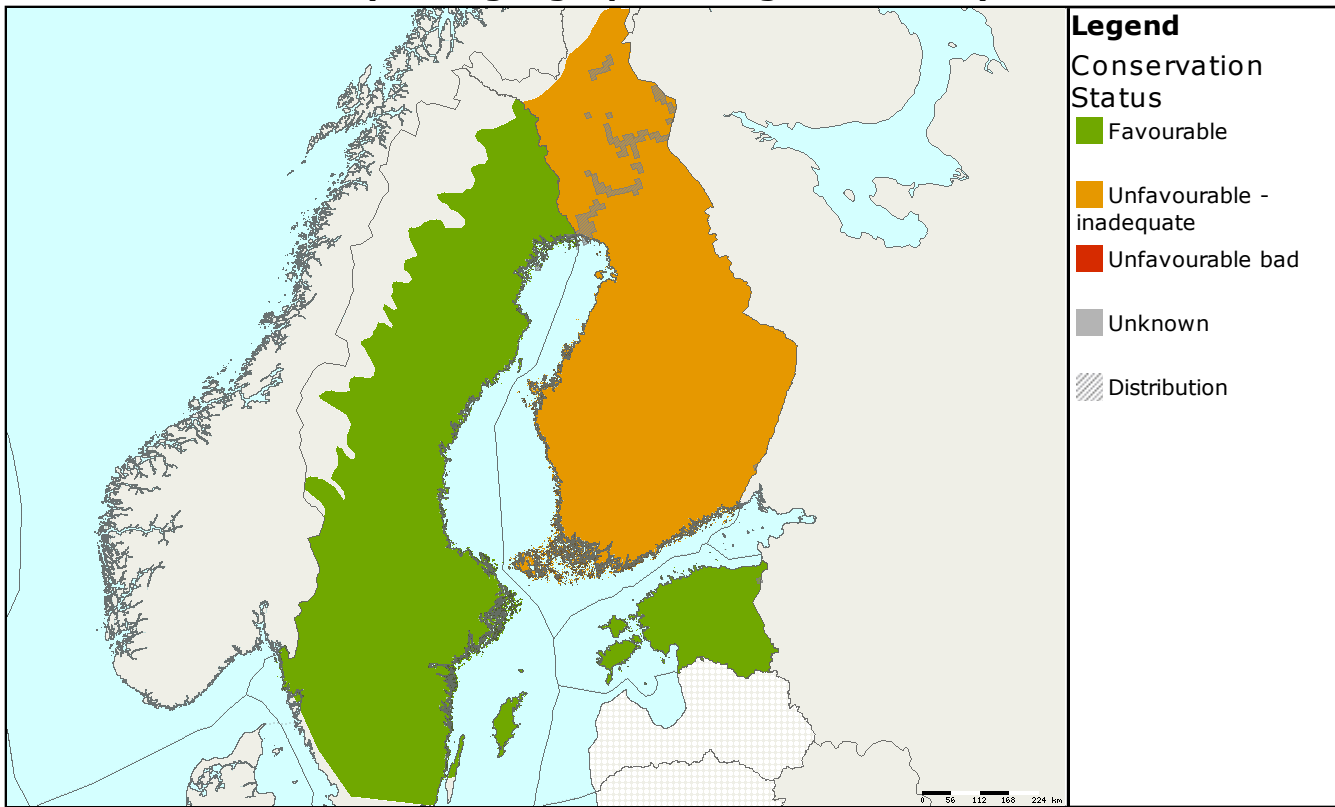

## Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	BOR						206 grids	=

*Moehringia lateriflora* is a flowering plant with circumpolar distribution including Russia, China, Japan and North America. Within the European Union it is very rare in Estonia and Sweden, more widespread in Finland (Boreal region). Considered 'favourable' in Estonia and Sweden, but not in Finland which has the majority of the population (based on distribution). Overall assessment is 'unfavourable-inadequate'.

## Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
EE	BOR						700 - 700 indiv.	=	1
FI	BOR						302 - (302) grids	=	2
SE	BOR						1000 - 1000 indiv.	=	1

Data quality is based on an assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at <http://biodiversity.eionet.europa.eu/article17>
