

Species name: **Naufraga balearica**
Annex: **II*, IV**

Species group: **Plants**
Regions: **MED**

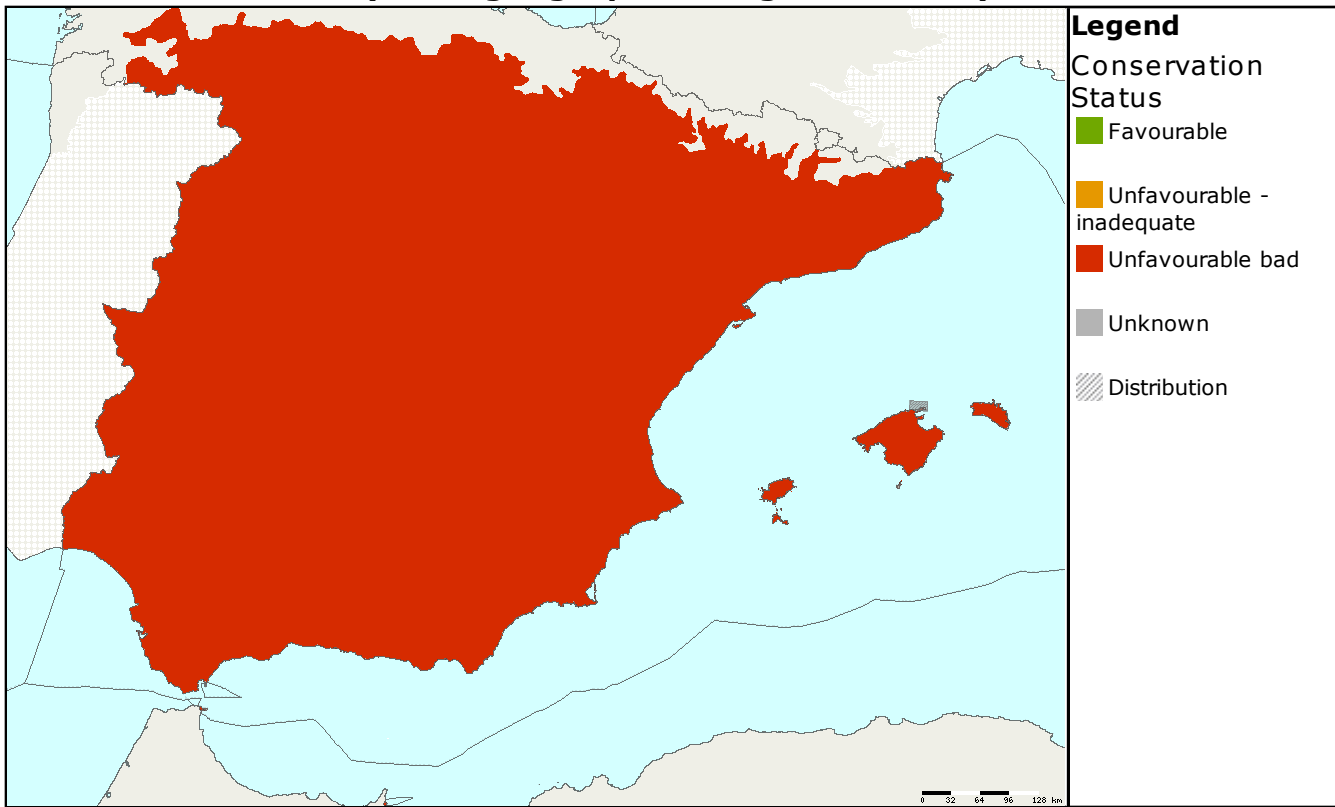

Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	MED							-

MED: Endemic to coastal cliffs on the north of Mallorca, Spain A monospecific genus The data provided for range would suggest unfavourable-bad if Ref value equal to actual rather than 'less than' which is presumably an error Better information required but also action if the species is to survive Included on IUCN list of 50 most threatened plant spp of Mediterranean islands and considered 'Critically Endangered' by IUCN See http://www.iucn.org/THEMES/SSC/our_work/plants/Top50/English/Naufraga_balearica_EN.htm

Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
ES	MED						N/A x	-	

Data quality is based on an assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at <http://biodiversity.eionet.europa.eu/article17>
