## **Habitats Directive Article 17 Reporting**

Species name: Orthotrichum rogeri Species group: Plants

Annex: II Regions: ALP ATL BOR CON

## Assessments of conservation status at the European level (all biogeographical regions - EU25)

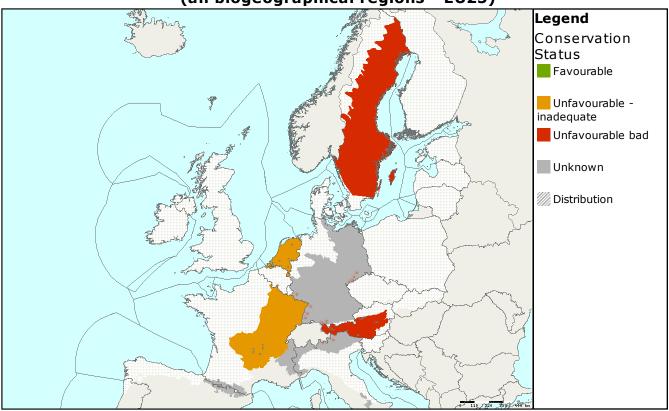

MS	Region		Conservatio	Population	Population			
		Range	Population	Habitat	Future prospects	Overall	Population size & unit	Trend
EU25	ALP						20 loc.	
EU25	ATL						5 - 10 loc.	+
EU25	BOR							-
EU 25	CON						28 loc.	

Orthotrichum rogeri is a moss occurring in central Europe. Some of the major threats: artificial planting, general forestry management, urbanised areas and air pollution. Despite of some favourable parameters assessments in case of France, the final result for Alpine region is 'unfavourable-bad' due to impact of the Austrian report. Same regional assessment applies for Boreal region where range and population trends are decreasing. In Atlantic region reported only from Netherlands. Overall assessment is 'unfavourable-inadequate' but all trends are increasing.

In Continental region final result is affected mostly by the German report (all unknown). Overall assessment is 'unknown but not favourable' influenced by high number of inadequate parameter assessments in French report.

## Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Region	С	onservation	status		Donulation	Data		
		Range	Population	Habitat	Future prospects	Overall	Size&unit	Population trend	quality
AT	ALP						10 - 10 loc.	-	3
ES	ALP						4 - 4 loc.	N/A	
FR	ALP						4 - 4 loc.	+	3
IT	ALP						2 - 2 loc.	Χ	3
NL	ATL						5 - 10 loc.	+	2
SE	BOR						N/A x	-	1
DE	CON						14 - (14) loc.	X	1
FR	CON						14 - 14 loc.	+	1

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006.
