

Species name: **Pericallis hadrosoma**
 Annex: **II*, IV**

Species group: **Plants**
 Regions: **MAC**

Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	MAC						15 indiv.	+

MAC: Endemic to Gran Canaria, Spain Except for habitat (unknown) all parameters assessed as unfavourable-bad. All populations small (15 individuals in total in 4 sub populations) and only senile plants. Its fruits are parasitised by the larva of an endemic díptera (*Oedosphenella canariensis*) although the plant can be cultivated easily from cuttings Action clearly required if the sp is to survive 'CR' in Spanish RDB See http://www.mma.es/portal/secciones/biodiversidad/inventarios/inb/flora_vascular/pdf/378.pdf

**Assessments of conservation status as reported by Member states
(all biogeographical regions - EU25)**

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
ES	MAC						15 - 15 indiv.	+	1

Data quality is based on an assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at <http://biodiversity.eionet.europa.eu/article17>
