

Species name: **Riccia breidlerii**
Annex: **II**

Species group: **Plants**
Regions: **ALP**

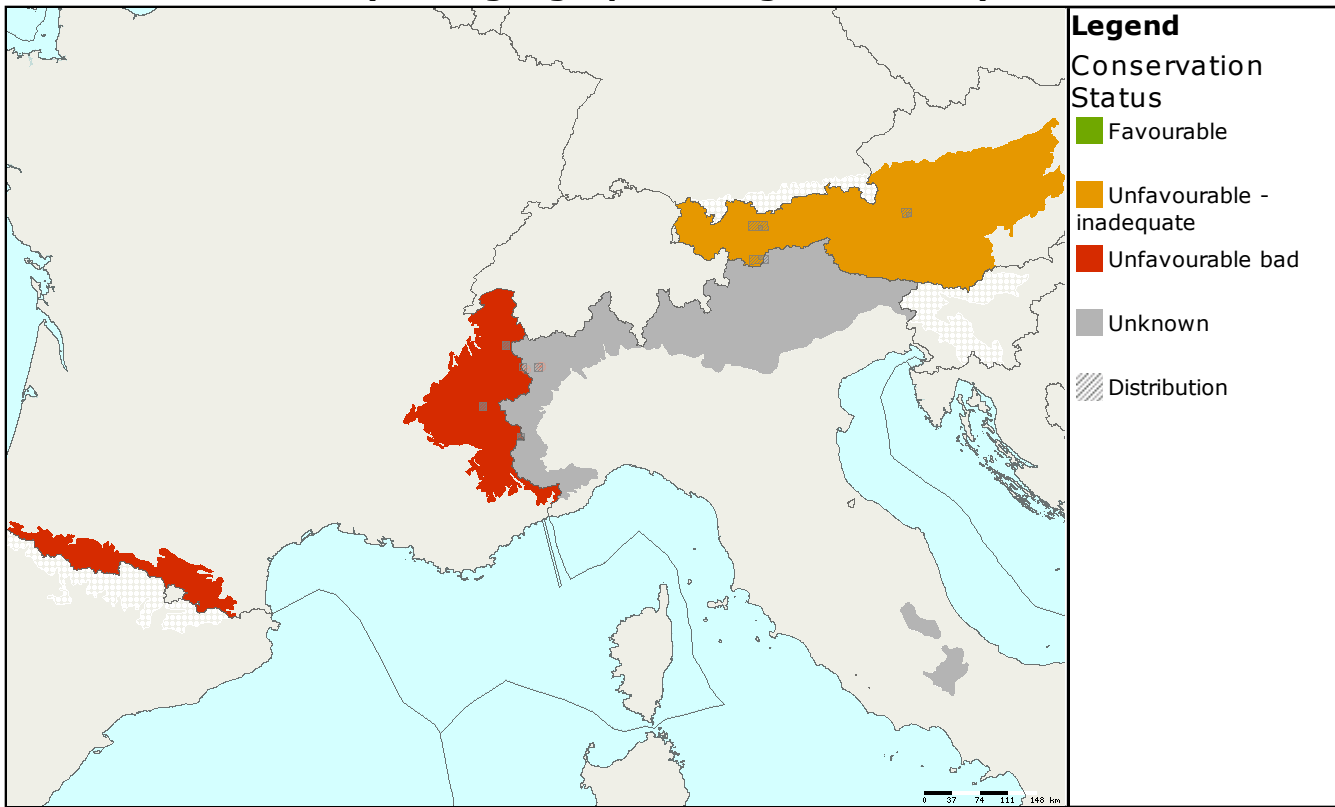

Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	ALP						12 loc.	

Riccia breidlerii is a moss species with most localities found in France (six). It is reported in Alpine region by France, Austria and Italy. French assessment is 'unfavourable-bad' due to bad future prospects. The species is reported as regressive due to climate change (particularly significant in mountain regions). In Austria and Italy, only three localities are found. In Italy, the species is reported as very poorly known. Overall assessment is 'unfavourable-bad'.

Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
AT	ALP						3 - 3 loc.	-	3
FR	ALP						6 - 6 loc.	=	1
IT	ALP						3 - 3 loc.	X	2

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at <http://biodiversity.eionet.europa.eu/article17>
