

Species name: **Rouya polygama**  
Annex: **II, IV**

Species group: **Plants**  
Regions: **MED**

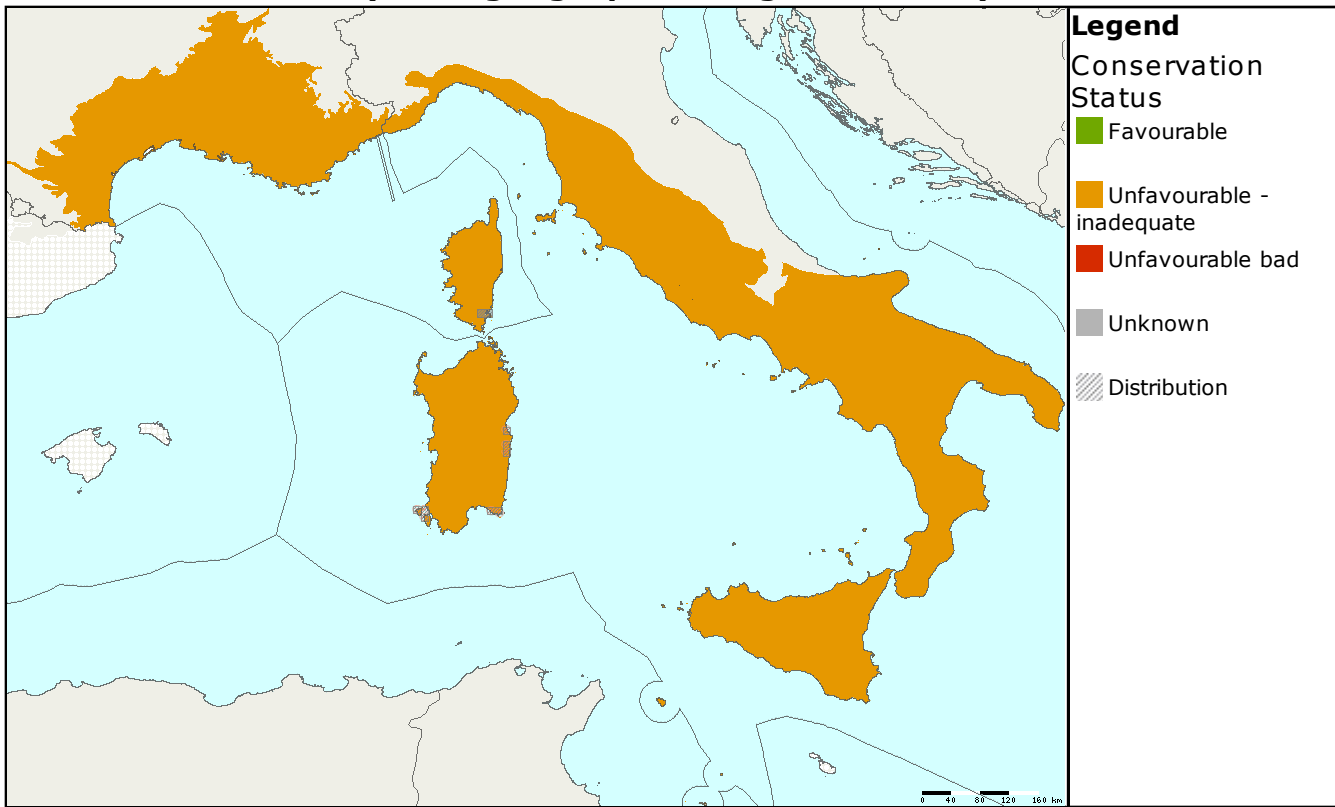

## Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	MED	Unfavourable - inadequate	Unfavourable - inadequate	Unknown	Unfavourable - inadequate	Unfavourable - inadequate	10 grids	

*Rouya polygama* is a plant that appears in the Mediterranean coast in France and Italy. Despite French report on range and population parameters with a “favourable” assessment, the overall status of conservation is “unfavourable-inadequate”. The main threats to the species are the development of urban areas, human habitation, outdoor sports and leisure activities.

**Assessments of conservation status as reported by Member states  
(all biogeographical regions - EU25)**

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
FR	MED						12000 - 12000 indiv.	+	1
IT	MED						9 - 9 loc.	=	2

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at
