

Species name: **Serratula lycopifolia**  
Annex: **II\*, IV**

Species group: **Plants**  
Regions: **ALP CON MED PAN**

## Assessments of conservation status at the European level (all biogeographical regions - EU25)

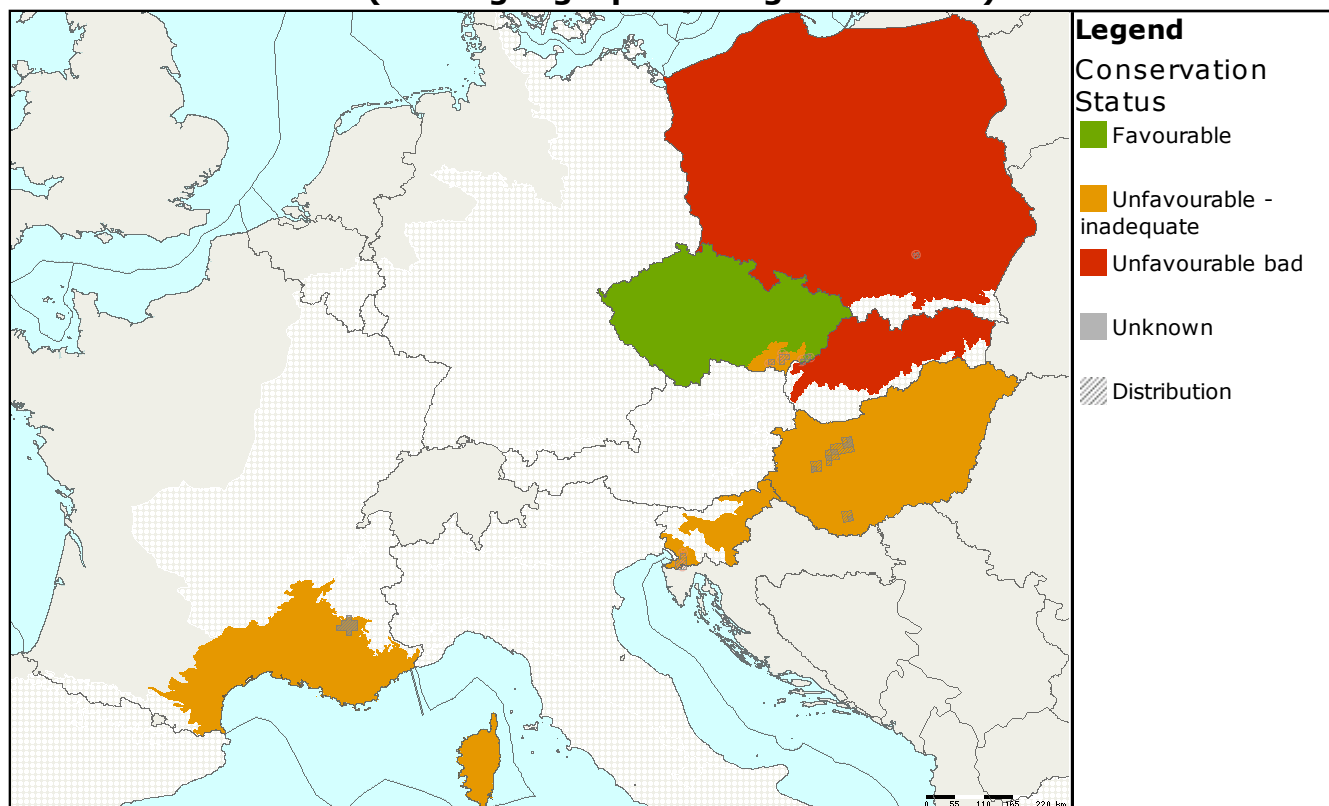

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	ALP	Unfavourable bad	Unfavourable bad	Unfavourable - inadequate	Unfavourable bad	Unfavourable bad	50 - 900 tufts	-
EU25	MED	Favourable	Unfavourable - inadequate	Unfavourable - inadequate	Unfavourable - inadequate	Unfavourable - inadequate	15 loc.	-
EU25	CON	Favourable	Favourable	Favourable	Unfavourable - inadequate	Unfavourable - inadequate	11 grids	x
EU25	PAN	Unfavourable - inadequate	Unfavourable - inadequate	Unfavourable - inadequate	Unfavourable - inadequate	Unfavourable - inadequate	29 grids	x

*Serratula lycopifolia* is a plant species with a wide distribution from France to Russia, including Austria, Czech Republic, Hungary, Romania, Slovakia, Slovenia and Poland in the Alpine, Continental, Mediterranean and Pannonian regions. Threats and pressures linked to changes in land use.

In the Alpine region it is only found in Slovakia and assessed as 'unfavourable-bad' due to small range and populations with threats and pressures linked to land use and other human impacts. In the Continental region although assessed as 'unfavourable-inadequate', it is considered 'favourable' in the Czech Republic but 'unfavourable-bad' in Poland. Within the Mediterranean biogeographical region it is only found in France close to the boundary with the Alpine region. Although range is considered 'favourable' all other parameters are 'unfavourable-inadequate' resulting in the same regional assessment. Same assessment is in Pannonian region.

## Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
SK	ALP						50 - 900 tufts	-	1
CZ	CON						N/A area	X	1
PL	CON						(100) - 100 indiv.	=	2
SI	CON						(6000) - 6000 indiv.	=	1
FR	MED						15 - 15 loc.	-	1
CZ	PAN						N/A area	X	2
HU	PAN						20500 - 21500 indiv.	=	2

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at <http://biodiversity.eionet.europa.eu/article17>
