

Species name: **Sphagnum pylaisii**
Annex: **II**

Species group: **Plants**
Regions: **ATL**

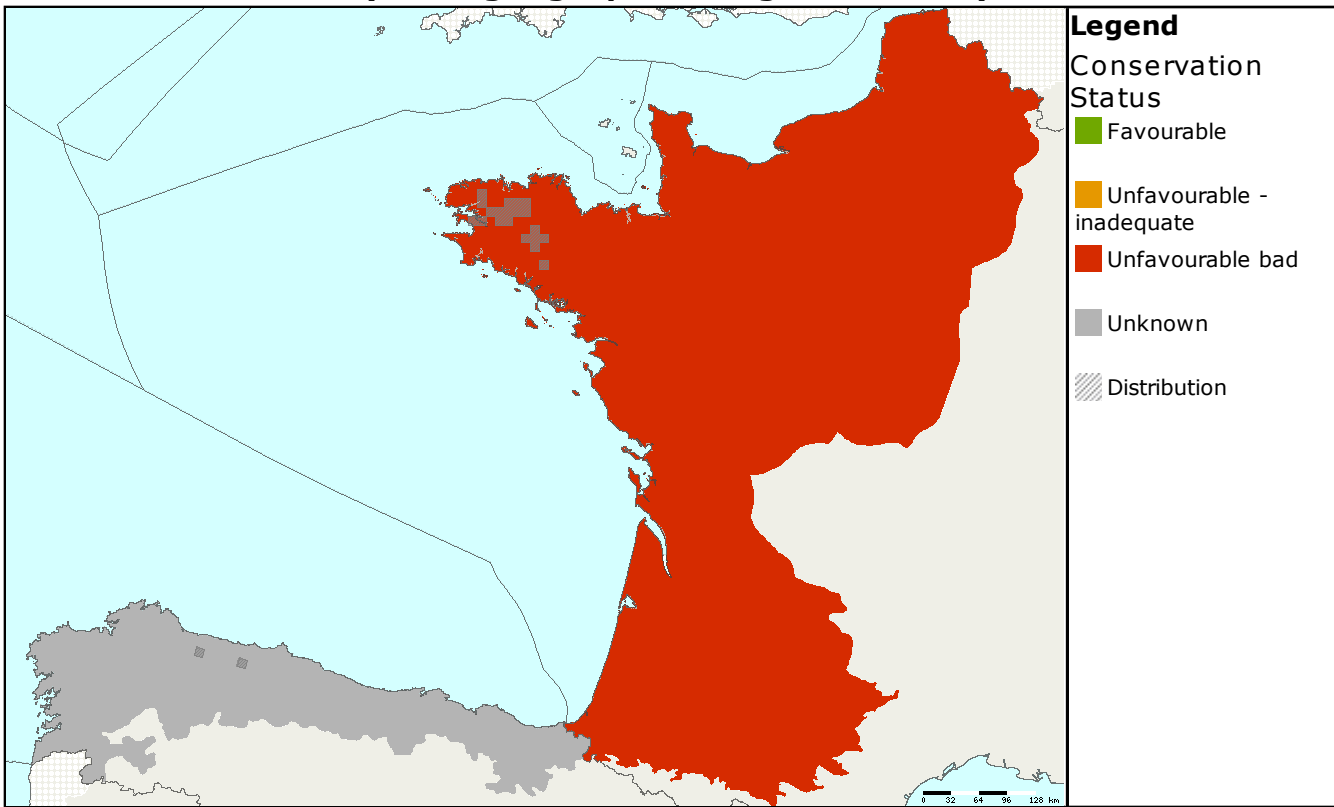

Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	ATL	Unfavourable - inadequate	Unfavourable bad	Unfavourable - inadequate	Unfavourable - inadequate	Unfavourable bad	22 grids	-

Sphagnum pylaisii is a plant occurring in northern Spain and western France. It is found in peat bogs and wet heaths. All parameters are assessed as "unknown" by Spain but the overall assessment is "unfavourable-bad" due to the small declining population in France.

**Assessments of conservation status as reported by Member states
(all biogeographical regions - EU25)**

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
ES	ATL						33 - (33) loc.	=	1
FR	ATL						73 - 73 x	-	1

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at
