

Species name: **Tayloria rudolphiana**
Annex: **II**

Species group: **Plants**
Regions: **ALP**

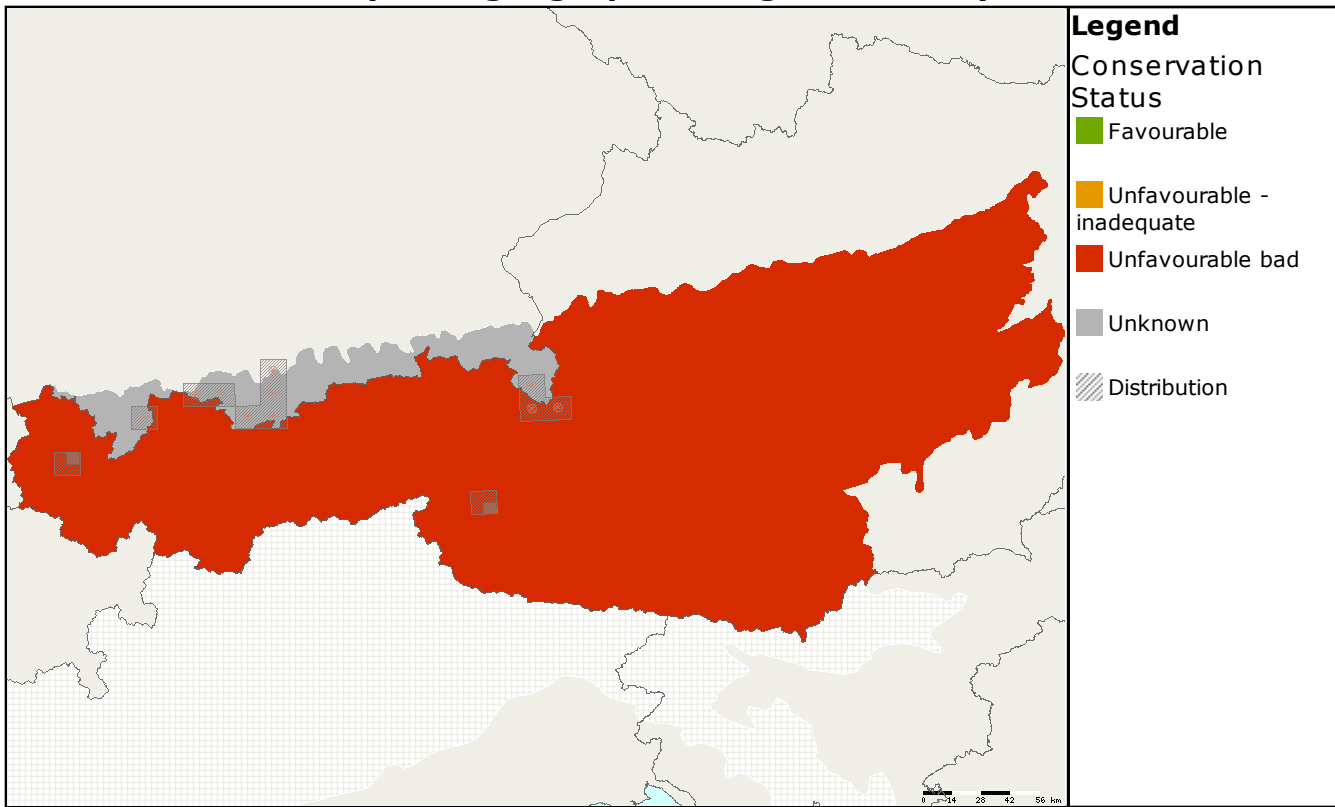

Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	ALP						16 grids	

Tayloria rudolphiana is a plant occurring in Austria and Germany. The species is most widespread in Germany, where all parameters were assessed as "unknown". The negative result of the Austrian report has a minor impact, being the overall assessment for the species "unknown".

Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
AT	ALP						2 - 2 loc.	-	3
DE	ALP						6 - (6) x	X	2

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at
