

Species name: **Thymelaea broterana**  
Annex: **IV**

Species group: **Plants**  
Regions: **ATL MED**

## Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	MED						6 grids	x
EU25	ATL							x

A plant species endemic to the North-Western Iberian peninsula. It occurs in several localities in Spain and Portugal. It is a woodland species preferring young forests.

The conservation status is 'unfavourable inadequate' in the Atlantic and the Mediterranean biogeographical regions. Although the reports for this in general very poorly known species are incomplete and the conservation status is unknown or was not assessed, based on the information on Future prospect of the species in Portugal it is possible to conclude, that the conservation status is 'unfavourable inadequate'. Better information on the status of the species and potential pressures and threats is required.

## Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
PT	ATL						N/A x	X	
ES	MED						2 - (2) loc.	N/A	1
PT	MED						N/A x	X	

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at <http://biodiversity.eionet.europa.eu/article17>
