

Species name: **Trisetum subalpestre**
Annex: **II, IV**

Species group: **Plants**
Regions: **ALP**

Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	ALP						17 grids	=

Trisetum subalpestre is a plant reported only by Finland and Sweden. The status of conservation for the species is "favourable" with all parameters reported as "favourable" by the countries. The species is threatened in Sweden because of the management of water level.

**Assessments of conservation status as reported by Member states
(all biogeographical regions - EU25)**

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
FI	ALP						1400 - (1400) flowr.	=	2
SE	ALP						50000 - 50000 indiv.	=	1

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at
