

Species name: **Vincetoxicum pannonicum**
Annex: **II, IV**

Species group: **Plants**
Regions: **PAN**

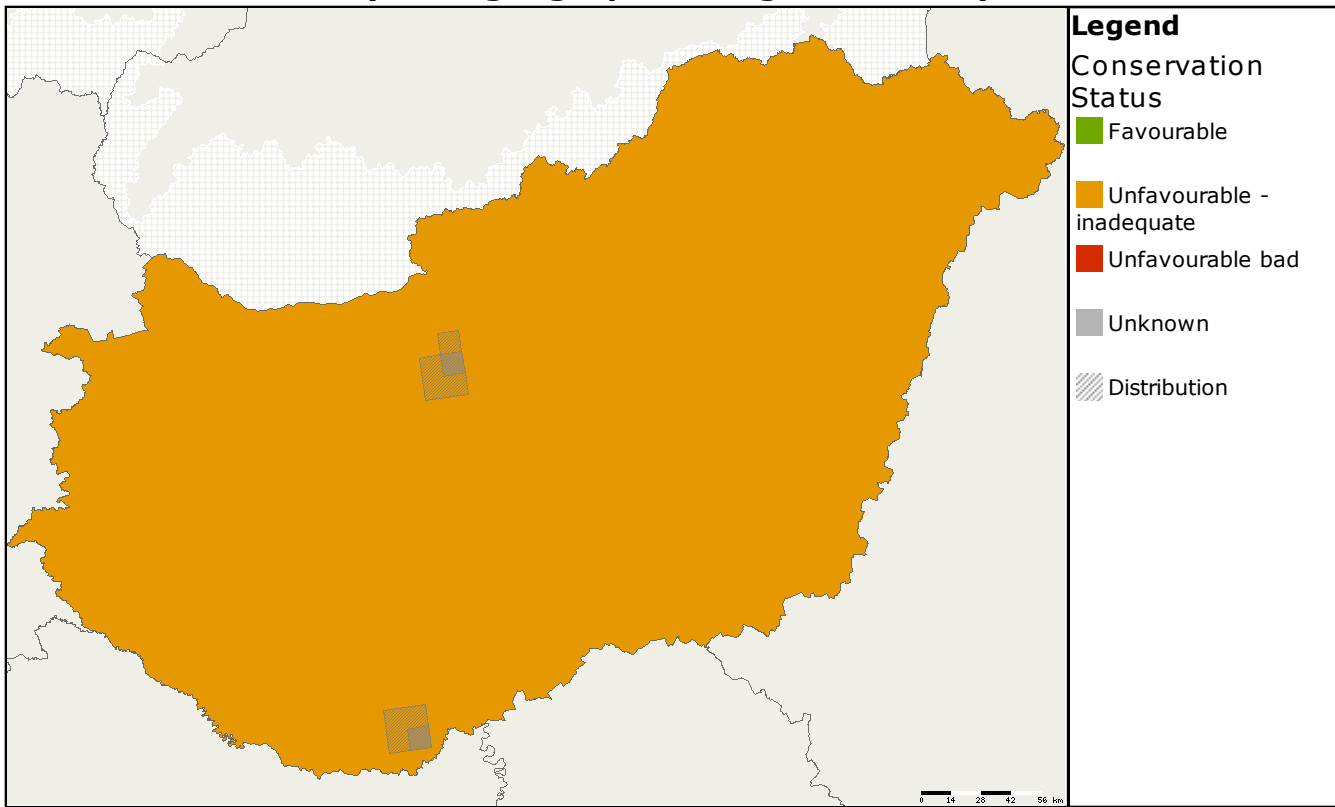

Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	PAN	█	█	█	█	█	2100 - 2200 indiv.	=

PAN: Endemic to Hungary where it is rare in the Buda hills and in the Villányi Hills of southern Transdanubia. Characteristic species of 6190 Rupicolous pannonic grasslands (*Stipo-Festucetalia pallentis*) which has been assessed unfavourable-inadequate in Hungary

**Assessments of conservation status as reported by Member states
(all biogeographical regions - EU25)**

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
HU	PAN						2100 - 2200 indiv.	=	1

Data quality is based on an assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at <http://biodiversity.eionet.europa.eu/article17>
