

Species name: ***Alisma wahlenbergii***
 Annex: **II*, IV**

Species group: **Plants**
 Regions: **BOR**

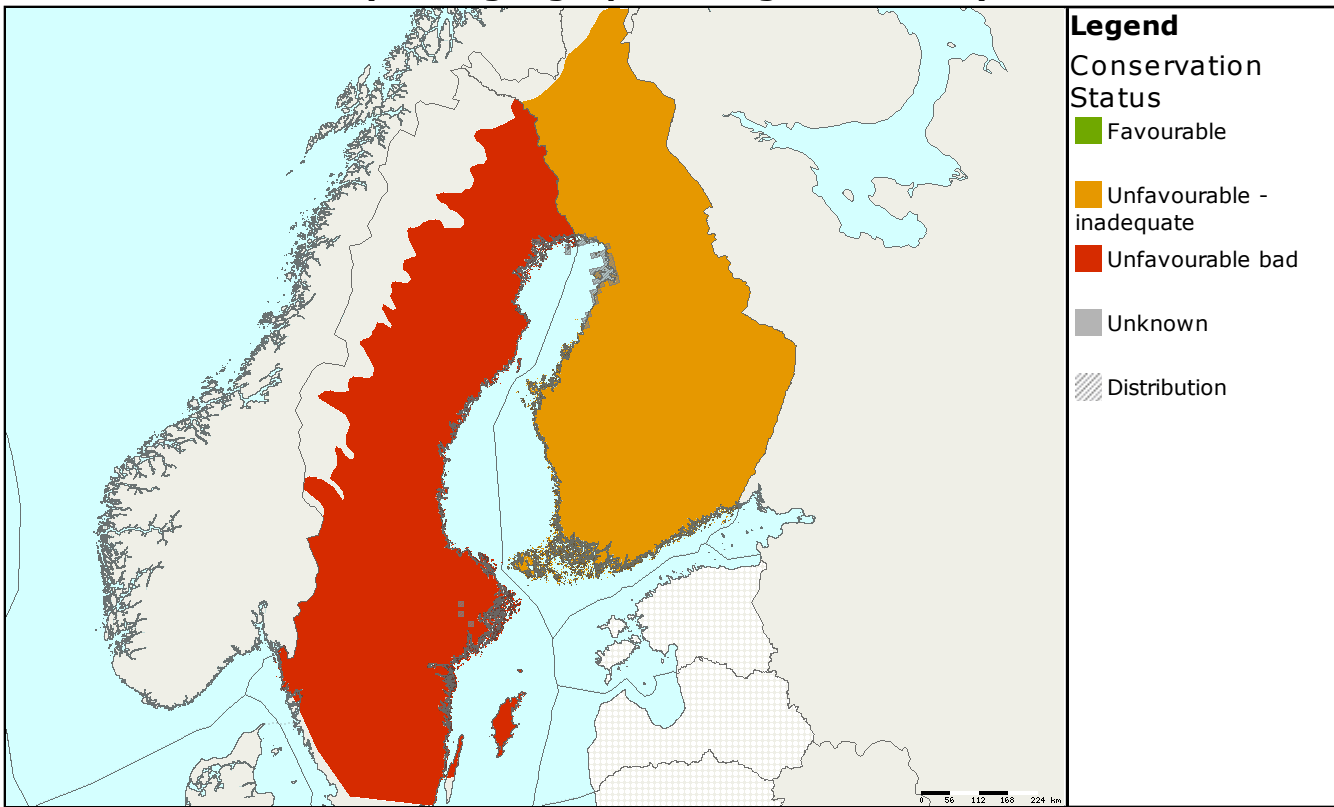

Assessments of conservation status at the European level (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Population size & unit	Population Trend
		Range	Population	Habitat	Future prospects	Overall		
EU25	BOR						43 grids	=

Alisma wahlenbergii is short-living perennial, aquatic plant endemic for Baltic region (Boreal biogeographical region). Species grows in shallow, slightly brackish waters. It is distributed in western Finland and south-eastern Sweden. In the past recorded in Lithuania as well (not reported in this assessment). Outside the European Union occurs in Russia (Gulf of Finland). Although the partial evaluations of 'range' and 'population' are indicated as 'favourable', the species' 'habitat' and 'future prospect' were assessed as 'unfavourable-inadequate'. That led to the overall assessment of conservation status being 'unfavourable-inadequate' as well.

Assessments of conservation status as reported by Member states (all biogeographical regions - EU25)

MS	Region	Conservation status assessment					Size&unit	Population trend	Data quality
		Range	Population	Habitat	Future prospects	Overall			
FI	BOR						90 - (90) loc.	=	1
SE	BOR						100000 - 100000 indiv.	=	2

Data quality is based on as assessment by each Member State, 1 = good, 2 = medium, 3 = poor

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2007 and covering the period 2001-2006. More detailed information is available at
