IMPORTANT NOTE

This QA/QC report is provided for information only. No additional delivery is required from the Member State. The reporting envelope is now closed and you are not able to upload any files.

However, National Data Coordinators are invited to use the Article 17 Consultation Tool to review the national data. The review process allows you to draw attention to new information or to significant errors in the Article 17 report. In doing so, the EU biogeographical assessments will be more accurate.

Please consult the background paper and user manual available at http://circa.europa.eu/Public/irc/env/monnat/library?l=/habitats_reporting/reporting_2001-2007/internet_consultation&vm=detailed&sb=Title to see how you can correct possible errors using the web tool (<http://biodiversity.eionet.europa.eu/article17>)

GENERAL REPORT - Data not compliant with QA/QC procedures

2. State of designation of Natura 2000

Issue 20

- 1 . No report was expected for marine regions. The sites with a marine component or marine sites should be reported in the adjacent terrestrial regions under the subtitle 'Marine'.

3.1 Management tools - Art. 6(1) - Management plans and Management bodies

Issue 31

- 1 . No sites with management plan in preparation were listed, although it was indicated that there are 802 sites belonging to this category.

3.2 Management tools - Art. 6(1) - Other territorial planning instruments

Issue 32

- 1 . A value of zero was given for the number of sites with other territorial planning instruments applied. No sites were listed under the respective title. This will be interpreted that territorial planning instruments were not applied.

3.3 Management tools - Art. 6(1) - Non-territorial planning instruments

Issue 33

- 1 . The value of zero was given as the number of sites with non-territorial planning instruments. No sites were listed under the respective title. This will be interpreted that non-planning instruments were not applied.

6. Measures taken in relation to approval of plans and projects - Art. 6(3,4)

Issue 60

- 1 . No sites affected by the projects were listed in the table.

10.1 Measures taken to ensure the protection of species (Arts. 12 to 16) - Requisite measures taken to establish a system of strict protection of Annex IV species

Issue 101

- 1 . No answer was given for the 'Species' concerned by respective measures.

10.2 Measures taken to ensure the protection of species (Arts. 12 to 16) - Control systems for the incidental capture and killing of species (Art. 12(4))

Issue 102

- 1 . No answer was given for the 'Species' concerned by respective measures.

10.3 Measures taken to ensure the protection of species (Arts. 12 to 16) - General main measures established to deal with the taking/exploitation in the wild of specimens of wild species of Annex V (Art. 14)

Issue 103

- 1 . Martre Putois, Lievre variable, Chamois, Grenouille rousse, Grenouille verte are not valid Latin species names.

10.4 Measures taken to ensure the protection of species (Arts. 12 to 16) - Types of controls to ensure that indiscriminate means of capture and killing of the species of Annex IVa) and Va) are not used (Art. 15)

Issue 104

- 1 . Escargot de Bourgogne, Sphaignes, Narcisse a feuille de joncs, Perce-neige, Lis de Pompone, Genepi, Gentiane jaune are not valid Latin species names.
Some of the measures provided in this section seem to refer to the regulation of the taking and exploitation of the Annex V species in the wild. These measures should be listed in section 'General main measures established to deal with the taking/exploitation in the wild of specimens of wild species of Annex V (Art. 14)'.

HABITATS REPORTING - Errors detected by QA/QC procedure

2.3.1 Surface range of the habitat

Issue 14350 Range in the XML file shows a difference of more than 5 % from the range calculated from the GML file in the corresponding biogeographical region (not buffered for calculation of minimum values and buffered by 15 km for maximum values). This discrepancy can be due to spatial data being generalized during creation of the GML

2.3.1 Surface range of the species

Issue 7750 **Range in the XML file shows a difference of more than 5 % from the range calculated from the GML file in the corresponding biogeographical region (not buffered for calculation of minimum values and buffered by 15 km for maximum values). This discrepancy can be due to spatial data being generalized during creation of the GML**
