This QA/QC report is provided for information only. No additional delivery is required from the Member State. The reporting envelope is now closed and you are not able to upload any files.

However, National Data Coordinators are invited to use the Article 17 Consultation Tool to review the national data. The review process allows you to draw attention to new information or to significant errors in the Article 17 report. In doing so, the EU biogeographical assessments will be more accurate.

Please consult the background paper and user manual available at

## GENERAL REPORT - Data not compliant with QA/QC procedures

### 2. State of designation of Natura 2000

*Issue 20*

- 1 . A value of zero was given as to the number of SACs and area of SACs. This will be interpreted that no (0) SACs have been designated to date.

### 3.1 Management tools - Art. 6(1) - Management plans and Management bodies

*Issue 31*

- 1 . A value of zero was given for number of sites for which management bodies were established. No sites were listed in the respective categories. It will be interpreted that until the end of the reporting period there were no sites with management bodies.

From the sites listed in the table those, where name of management plan was not provided nor it was indicated that the management plan is in preparation, are not going to be considered as relevant for this section.

### 3.3 Management tools - Art. 6(1) - Non-territorial planning instruments

*Issue 33*

- 1 . A zero value was given as the number of sites with non-territorial planning instruments. No sites were listed under the respective title. This will be interpreted that non-planning instruments were not applied.

### 6. Measures taken in relation to approval of plans and projects - Art. 6(3,4)

*Issue 60*

- 1 . A value of zero was given for the number of projects for which compensation measures were necessary and Commission opinion was requested. No sites were listed in the relevant categories. It will be interpreted that compensation measures were not necessary and that there was no case where Commission opinion was requested.

*Issue 15050 The end of range trend period differs by two years or more from date (or end of period) of range determination. The range area and its trend are most probably not connected, as being estimated from different datasets. This makes the sub-conclusion doubtful*

### 2.3.1 Surface range of the species

*Issue 7750 Range in the XML file shows a difference of more than 5 % from the range calculated from the GML file in the corresponding biogeographical region (not buffered for calculation of minimum values and buffered by 15 km for maximum values). This discrepancy can be due to spatial data being generalized during creation of the GML*
