

2220 Dunes with *Euphorbia terracina*

Habitat code	2220
Priority	No
Habitat group	dunes habitats
Regions	Mediterranean

Dune grasslands with coastal spurge (*Euphorbia terracina*) are only found in the Mediterranean region. They are also present on the island of Cyprus but not in the part where the *Aquis Communautaire* applies at present. As *Euphorbia terracina* also occurs in other countries there may be differences in interpretation.

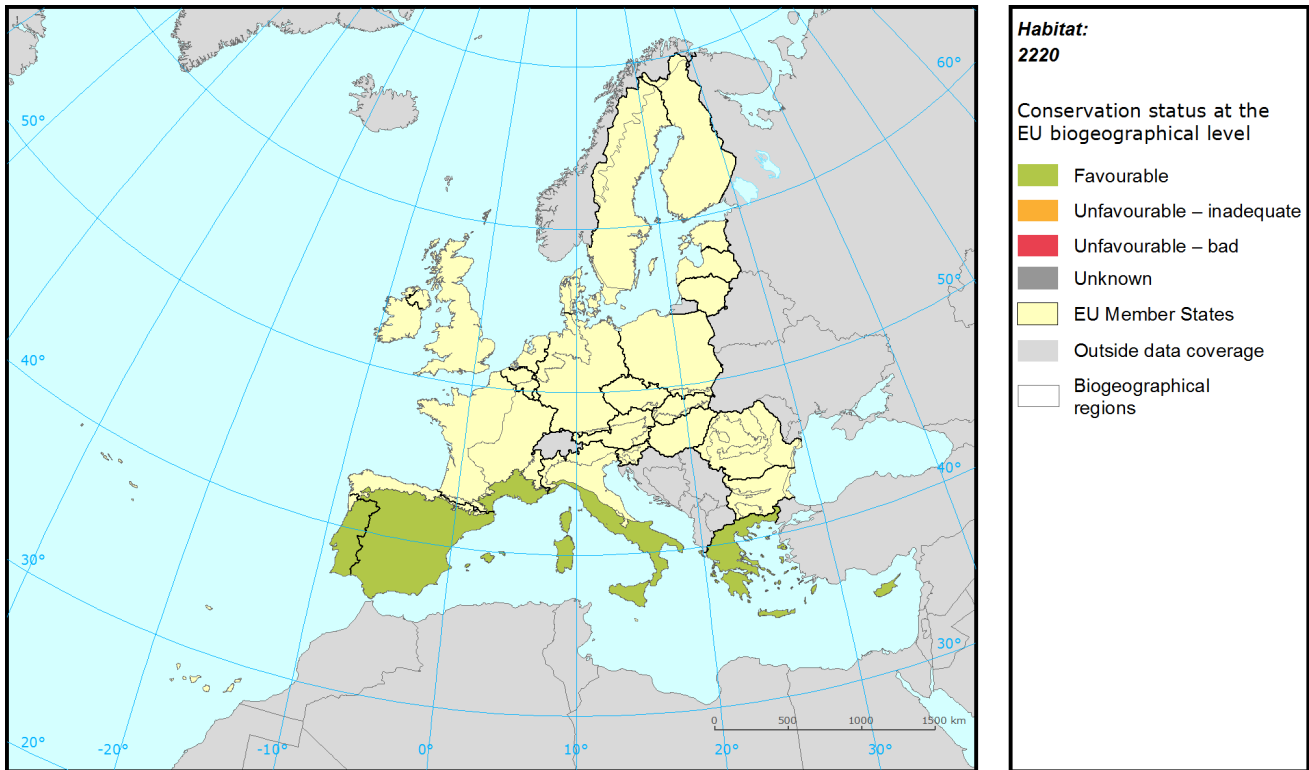

In Malta the same value is reported for range and area, for area the value (in km²) is the same as the gridded area of distribution which is not possible. Using the figures reported overestimates the proportion of the habitat present in Malta so weighting has been by gridded distribution, and together with the use of information from Greece from 2001-06 (no Greek reports for 2007-12) means that it is difficult to have confidence in the EU regional assessment of Favourable. The change from the 2001-06 assessment (Favourable) is due to changes in methodology and not considered genuine.

Threats and pressures are linked to tourism and urbanisation.

Habitat: 2220 *Dunes with Euphorbia terracina*

Report under the Article 17 of the Habitats Directive

Assessment of conservation status at the European biogeographical level

Region	Conservation status (CS) of parameters				Current CS	Trend in CS	% in region	Previous CS	Reason for change
	Range	Area	Structure & Functions	Future prospects					
MED	FV	FV	FV	XX	FV	=	100	U2	Not genuine

See the endnote for more informationⁱ

Habitat: 2220 *Dunes with Euphorbia terracina*

Report under the Article 17 of the Habitats Directive

Assessment of conservation status at the Member State level

Habitat: 2220

Distribution and conservation status at the Member State level

- | | |
|---------------------------|------------------------|
| Favourable | EU Member States |
| Unfavourable – inadequate | Outside data coverage |
| Unfavourable – bad | Biogeographical region |
| Unknown | |

The map shows both Conservation Status and distribution using a 10 km x 10 km grid. Conservation status is assessed at biogeographical level. Therefore the representation in each grid cell is only illustrative.

Habitat: 2220 *Dunes with Euphorbia terracina*

Report under the Article 17 of the Habitats Directive

MS	Region	Conservation status (CS) of parameters				Current CS	Trend in CS	% in region	Previous CS	Reason for change
		Range	Area	Structure & functions	Future prospects					
GR	MED	FV	FV	FV	XX	FV	=	90.3	FV	
MT	MED	FV	FV	U1	U2	U2	=	6.5	U2	Changed method
UK	MED	FV	FV	FV	U1	U1	=	3.2	FV	Better data

Knowing that not all changes in conservation status between the reporting periods were genuine, Member States were asked to give the reasons for changes in conservation status. Bulgaria and Romania only joined the EU in 2007 and Greece did not report for 2007-12 so no reason is given for change for these countries. Greek data shown above is from 2001-06.

Main pressures and threats reported by Member States

Member States were asked to report the 20 most important threats and pressures using an agreed hierarchical list which can be found on the [Article 17 Reference Portal](#). Pressures are activities which are currently having an impact on the habitats and threats are activities expected to have an impact in the near future. Pressures and threats were ranked in three classes 'high, medium and low importance'; the tables below only show threats and pressures classed as 'high', for some habitats there were less than ten threats or pressures reported as highly important.

Ten most frequently reported 'highly important' pressures

Code	Activity	Frequency
E01	Urbanisation and human habitation	25
G02	Sport and leisure infrastructures	25
G05	Other human intrusions and disturbances	25
I01	Invasive alien species	25

Ten most frequently reported 'highly important' threats

Code	Activity	Frequency
E01	Urbanisation and human habitation	25
G05	Other human intrusions and disturbances	25
I01	Invasive alien species	25
L07	Storm, cyclone	25

Habitat: 2220 *Dunes with Euphorbia terracina*

Report under the Article 17 of the Habitats Directive

Proportion of population covered by the Natura 2000 network

Member States were asked to report the area of the habitat which is covered by the Natura 2000 network. The percentage of the habitat area covered by the network was estimated by comparing the area within the network and the total area in the biogeographical/marine region.

Percentage of coverage by Natura 2000 sites in biogeographical/marine region

MED	
MT	60
UK	100

See the endnotes for more informationⁱⁱ

Most frequently reported conservation measures

Member States were asked to report up to 20 conservation measures being implemented for this habitat using an agreed list which can be found on the Article 17 Reference Portal. Member States were further requested to highlight up to five most important ('highly important') measures; the table below only shows measures classed as 'high', for many habitats there were less than ten measures reported as highly important.

Ten most frequently reported 'highly important' conservation measures

Code	Measure	Frequency
4.4	Restoring coastal areas	20
6.1	Establish protected areas/sites	20
6.3	Legal protection of habitats and species	20
6.4	Manage landscape features	20
7.1	Regulation/ Management of hunting and taking	20

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2013 and covering the period 2007-2012. More detailed information, including the MS reports, is available at:

<http://bd.eionet.europa.eu/article17/reports2012/habitat/summary/?group=Dunes+habitats&period=3&subject=2220>

Habitat: 2220 *Dunes with Euphorbia terracina*

Report under the Article 17 of the Habitats Directive

i Assessment of conservation status at the European biogeographical level: Current Conservation Status (Current CS) shows the status for the reporting period 2007-2012, Previous Conservation Status (Previous CS) for the reporting period 2000-2006. Reason for change in conservation status between the reporting periods indicates whether the changes in the status were genuine or not genuine. Previous Conservation Status was not assessed for Steppic, Black Sea and Marine Black Sea regions. For these regions the Previous status is therefore considered as 'unknown'. The percentage of the habitat area occurring within the biogeographical/marine region (% in region) is calculated based on the area of GIS distribution.

ii Percentage of coverage by Natura 2000 sites in biogeographical/marine region: In some cases the population size within the Natura 2000 network has been estimated using a different methodology to the estimate of overall population size and this can lead to percentage covers greater than 100%. In such case the value has been given as 100% and highlighted with an asterisk (*). The value 'x' indicates that the Member State has not reported the habitat area and/or the coverage by Natura 2000. No information is available for Greece. The values are only provided for regions, in which the occurrence of the habitat has been reported by the Member States.
