

Globicephala macrorhynchus

Annex	IV
Priority	No
Species group	Mammals
Regions	Marine Atlantic, Marine Macaronesian, Marine Mediterranean

Globicephala macrorhynchus

The short-finned pilot whale, *Globicephala macrorhynchus*, is distributed in the warm temperate waters of the marine Macaronesian region where it generally inhabits the deep offshore areas, ranging between 1000-2500 meters in depth, surrounding the islands of Madeira and the Canaries.

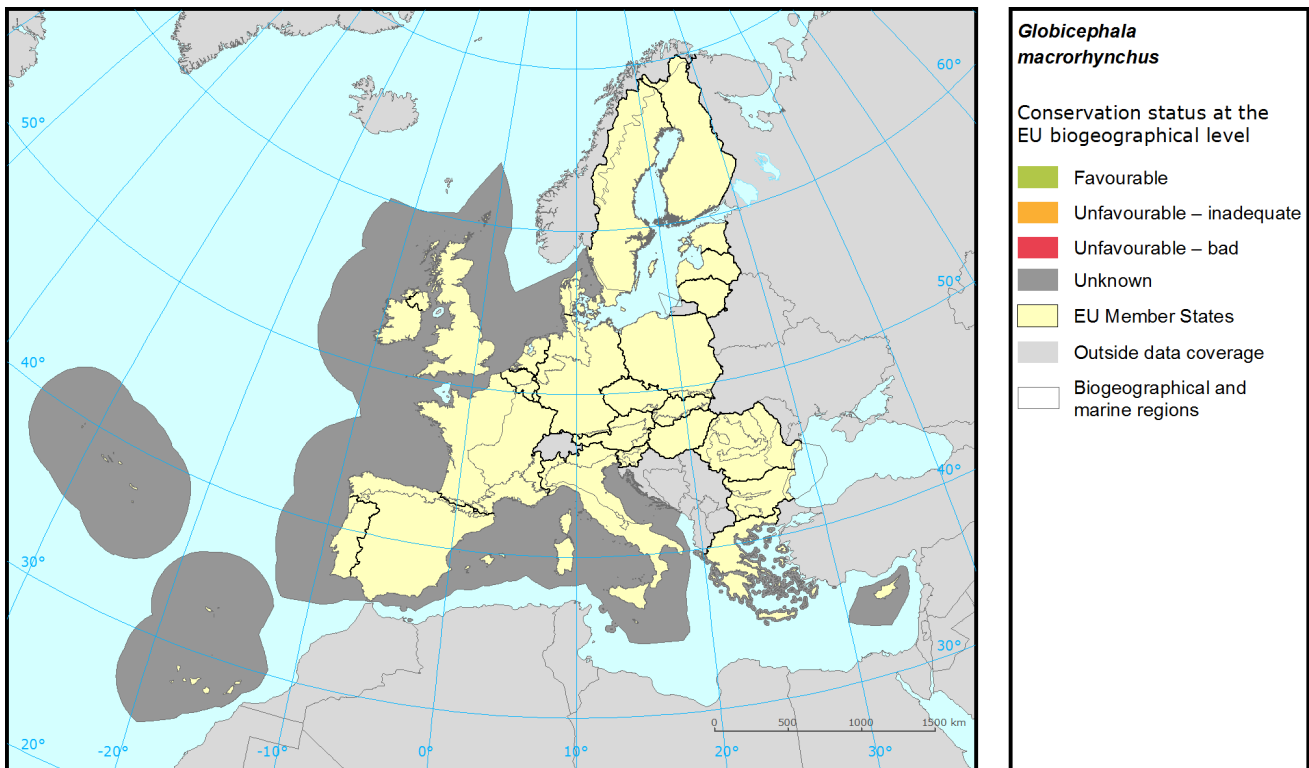

In the Marine Mediterranean- and Marine Atlantic region, the species is only present in United Kingdom and Spain, respectively, and is reported as occasional, vagrant or marginal. The overall assessment is 'unknown' (XX) for all region, same as in 2001-2007. This conservation status is in line with its IUCN listing as 'data deficient' in the Red List of threatened species.

Main pressure and treats reported are; shipping lanes, wildlife watching, military manoeuvres, noise nuisance noise pollution, renewable abiotic energy use, reduction or loss of specific habitat features, marine water pollution, marine macro-pollution (i.e. plastic bags, styrofoam).

Species: *Globicephala macrorhynchus*

Report under the Article 17 of the Habitats Directive

Assessment of conservation status at the European biogeographical level

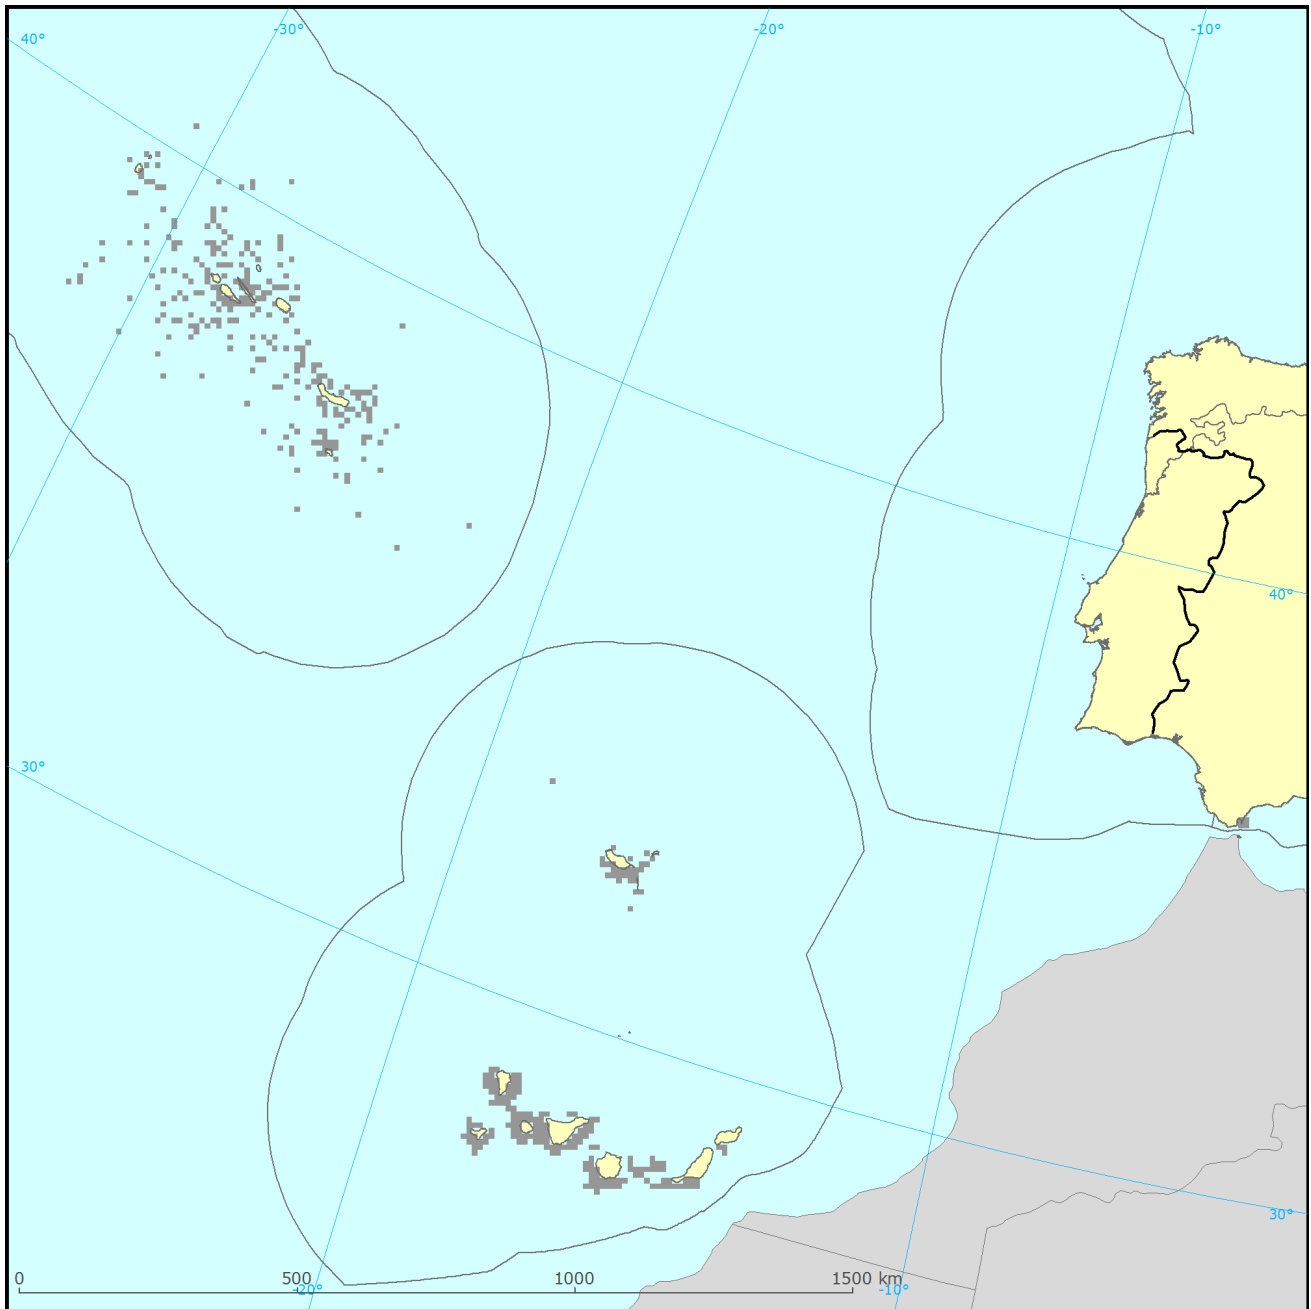

Region	Conservation status (CS) of parameters				Current CS	Trend in CS	% in region	Previous CS	Reason for change
	Range	Population	Habitat	Future prospects					
MATL	FV	XX	XX	XX	XX	x		XX	
MMAC	XX	XX	XX	XX	XX	x	99	XX	
MMED	XX	XX	XX	XX	XX	x	0.88	XX	

See the endnote for more informationⁱ

Species: *Globicephala macrorhynchus*

Report under the Article 17 of the Habitats Directive

Assessment of conservation status at the Member State level

Globicephala macrorhynchus

Distribution and conservation status at the Member State level

- | | |
|---------------------------|------------------------------------|
| Favourable | EU Member States |
| Unfavourable – inadequate | Outside data coverage |
| Unfavourable – bad | Biogeographical and marine regions |
| Unknown | |

The map shows both Conservation Status and distribution using a 10 km x 10 km grid. Conservation status is assessed at biogeographical level. Therefore the representation in each grid cell is only illustrative.

Species: *Globicephala macrorhynchus*

Report under the Article 17 of the Habitats Directive

MS Region	Conservation status of parameters				Current CS	Trend in CS	% in region	Previous CS	Reason for change
	Range	Population	Habitat	Future prospects					
ES MATL	FV	XX	XX	XX	XX				
ES MMAC	FV	XX	XX	XX	XX		FV	Changed method	
PT MMAC	XX	FV	XX	FV	XX	100.0	XX		
UK MMED	XX	XX	XX	XX	XX				

Knowing that not all changes in conservation status between the reporting periods were genuine, Member States were asked to give the reasons for changes in conservation status. Bulgaria and Romania only joined the EU in 2007 and Greece did not report for 2007-12 so no reason is given for change for these countries. Greek data shown above is from 2001-06.

Main pressures and threats reported by Member States

Member States were asked to report the 20 most important threats and pressures using an agreed hierarchical list which can be found on the [Article 17 Reference Portal](#). Pressures are activities which are currently having an impact on the species and threats are activities expected to have an impact in the near future. Pressures and threats were ranked in three classes 'high, medium and low importance'; the tables below only show threats and pressures classed as 'high', for some species there were less than ten threats or pressures reported as highly important.

Ten most frequently reported 'highly important' pressures

Code	Activity	Frequency
No 'highly important' pressures were reported.		

Ten most frequently reported 'highly important' threats

Code	Activity	Frequency
No 'highly important' threats were reported.		

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2013 and covering the period 2007-2012. More detailed information, including the MS reports, is available at:

<http://bd.eionet.europa.eu/article17/reports2012/species/summary/?group=Mammals&period=3&subject=Globicephala+macrorhynchus>

Species: *Globicephala macrorhynchus*

Report under the Article 17 of the Habitats Directive

i Assessment of conservation status at the European biogeographical level: Current Conservation Status (Current CS) shows the status for the reporting period 2007-2012, Previous Conservation Status (Previous CS) for the reporting period 2000-2006. Reason for change in conservation status between the reporting periods indicates whether the changes in the status were genuine or not genuine. Previous Conservation Status was not assessed for Steppic, Black Sea and Marine Black Sea regions. For these regions the Previous status is therefore considered as 'unknown'. The percentage of the species population occurring within the biogeographical/marine region (% in region) is calculated based on the area of GIS distribution.
