

## Pipistrellus maderensis

---

<b>Annex</b>	IV
<b>Priority</b>	No
<b>Species group</b>	Mammals
<b>Regions</b>	Macaronesian

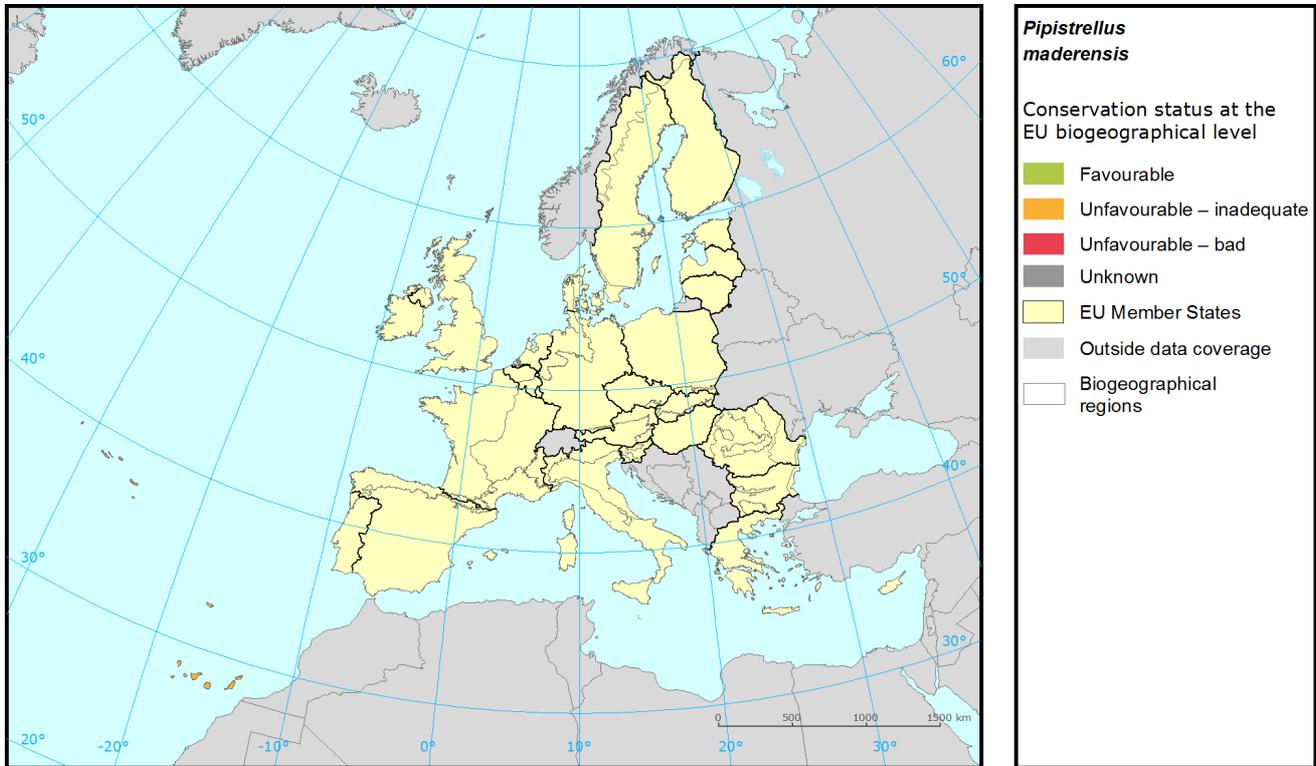

The Madeira Pipistrelle is a bat species endemic of Macaronesia (Madeira and Azores archipelagos and the Canary Islands); it forages over a wide range of habitats (aquatic, woodland, laurel forests, farmland).

Its conservation status in the Macaronesian region is 'unfavourable-inadequate'; however, its status in the Canary Islands is 'unknown'. The main pressures are agricultural intensification and use of chemicals, forest exploitation, demolition of and renovation of buildings.

The species is classified by IUCN as 'endangered' (<http://www.iucnredlist.org/details/17315/1>, consulted 12 May 2014).

Species: *Pipistrellus maderensis*  
Report under the Article 17 of the Habitats Directive

## Assessment of conservation status at the European biogeographical level

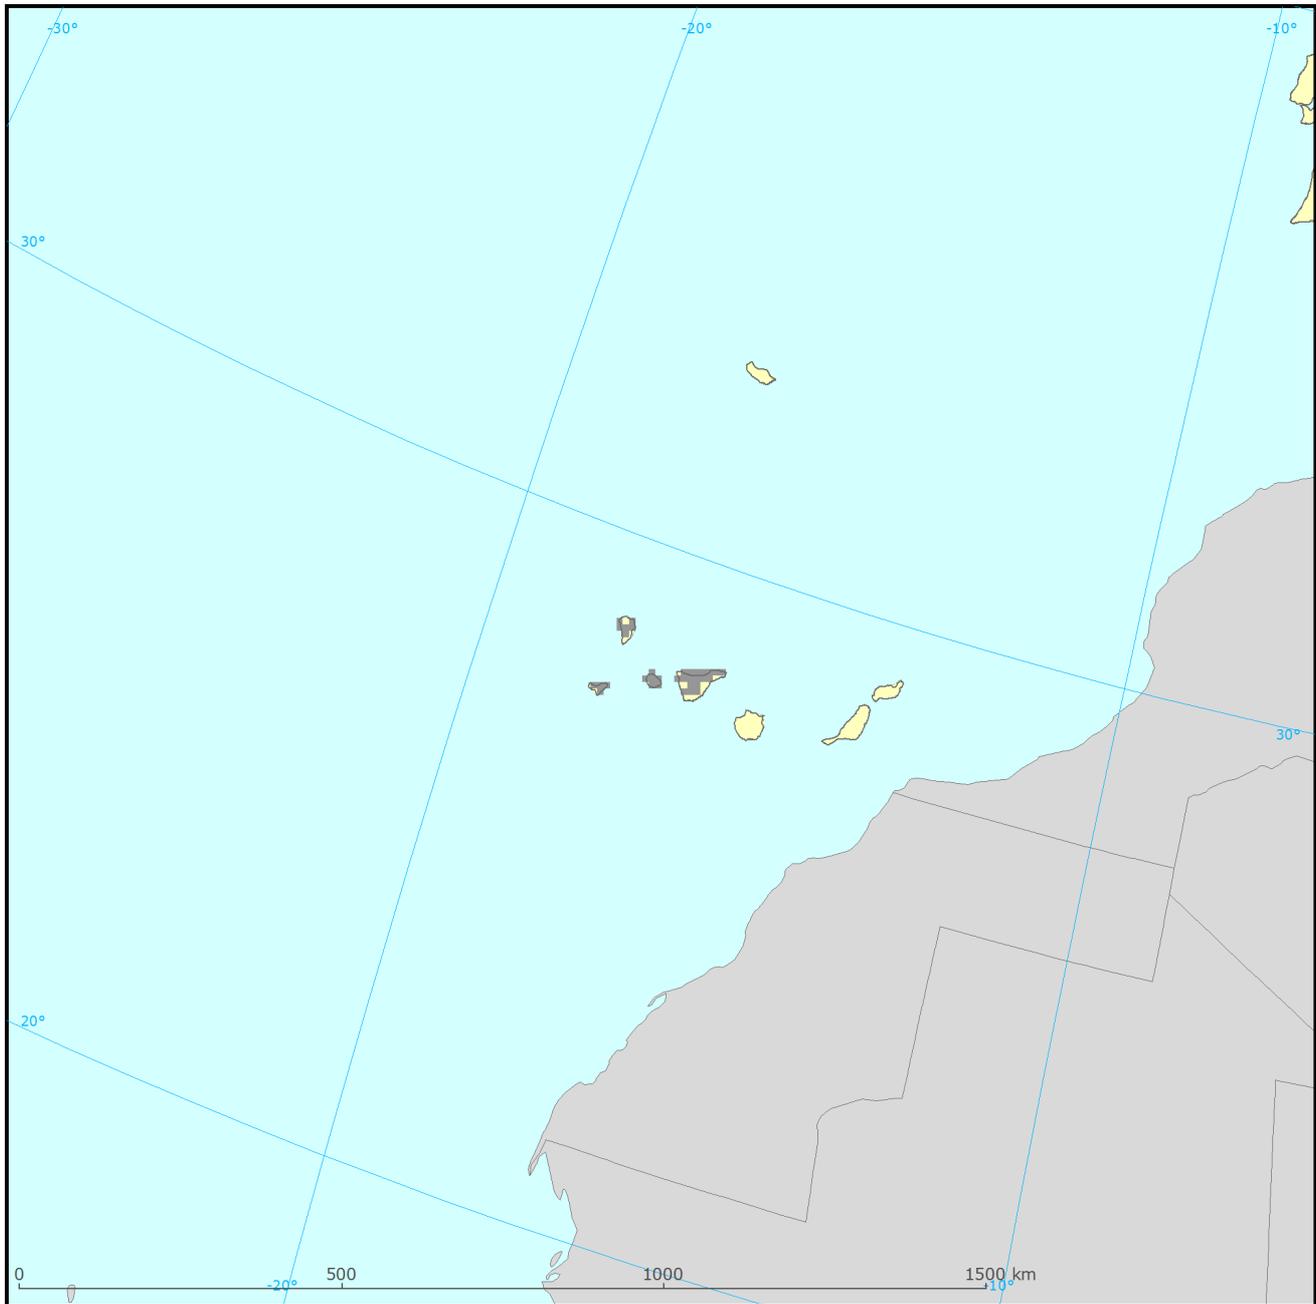

Region	Conservation status (CS) of parameters				Current CS	Trend in CS	% in region	Previous CS	Reason for change
	Range	Population	Habitat	Future prospects					
MAC	XX	XX	U1	U1	U1	-	100	U2	Not genuine

See the endnote for more information<sup>i</sup>

Species: *Pipistrellus maderensis*  
Report under the Article 17 of the Habitats Directive

## Assessment of conservation status at the Member State level

### *Pipistrellus maderensis*

Distribution and conservation status at the Member State level

- |                           |                        |
|---------------------------|------------------------|
| Favourable                | EU Member States       |
| Unfavourable – inadequate | Outside data coverage  |
| Unfavourable – bad        | Biogeographical region |
| Unknown                   |                        |

The map shows both Conservation Status and distribution using a 10 km x 10 km grid. Conservation status is assessed at biogeographical level. Therefore the representation in each grid cell is only illustrative.

# Species: *Pipistrellus maderensis*

Report under the Article 17 of the Habitats Directive

MS	Region	Conservation status of parameters				Current CS	Trend in CS	% in region	Previous CS	Reason for change
		Range	Population	Habitat	Future prospects					
ES	MAC	XX	XX	XX	FV	XX	37.8	FV	Changed method	
PT	MAC	XX	XX	U1	U1	U1	62.2	U2+	Changed method	

Knowing that not all changes in conservation status between the reporting periods were genuine, Member States were asked to give the reasons for changes in conservation status. Bulgaria and Romania only joined the EU in 2007 and Greece did not report for 2007-12 so no reason is given for change for these countries. Greek data shown above is from 2001-06.

## Main pressures and threats reported by Member States

Member States were asked to report the 20 most important threats and pressures using an agreed hierarchical list which can be found on the [Article 17 Reference Portal](#). Pressures are activities which are currently having an impact on the species and threats are activities expected to have an impact in the near future. Pressures and threats were ranked in three classes 'high, medium and low importance'; the tables below only show threats and pressures classed as 'high', for some species there were less than ten threats or pressures reported as highly important.

### Ten most frequently reported 'highly important' pressures

Code	Activity	Frequency
A02	Modification of cultivation practices	25
B02	Forest and plantation management & use	25
E06	Other urban/industrial developments	25
G05	Other human intrusions and disturbances	25

### Ten most frequently reported 'highly important' threats

Code	Activity	Frequency
A02	Modification of cultivation practices	33
E06	Other urban/industrial developments	33
G05	Other human intrusions and disturbances	33

This information is derived from the Member State national reports submitted to the European Commission under Article 17 of the Habitats Directive in 2013 and covering the period 2007-2012. More detailed information, including the MS reports, is available at:

<http://bd.eionet.europa.eu/article17/reports2012/species/summary/?group=Mammals&period=3&subject=Pipistrellus+maderensis>

# Species: *Pipistrellus maderensis*

Report under the Article 17 of the Habitats Directive

**i Assessment of conservation status at the European biogeographical level:** Current Conservation Status (Current CS) shows the status for the reporting period 2007-2012, Previous Conservation Status (Previous CS) for the reporting period 2000-2006. Reason for change in conservation status between the reporting periods indicates whether the changes in the status were genuine or not genuine. Previous Conservation Status was not assessed for Steppic, Black Sea and Marine Black Sea regions. For these regions the Previous status is therefore considered as 'unknown'. The percentage of the species population occurring within the biogeographical/marine region (% in region) is calculated based on the area of GIS distribution.
