# Status of emission inventories, Denmark

Status of emission inventories  
April 22<sup>nd</sup> 2020

**1. What is your experience with the reporting for the 2<sup>nd</sup> Water Framework Directive (WFD) River Basin Management Plan (RBMP)? (did you encounter specific problems?)**

**The Danish EPA had some difficulties with the data setup as well as providing information on analytical methods; especially, difficulties were experienced in cases where a lack of the relevant data prevented to proceed the subsequent reporting.**

## **2. What are your plans and needs for reporting of emission for the 3<sup>rd</sup> WFD RBMP? (suggestions how this project might help with that?)**

**The Danish EPA expects to be challenged by a lack of data and, hence, we expect to encounter difficulties following the guidance/simplified method for the quantification of emissions to water (i.e. filling in the formulas with the right input data).**

**3. Do you have specific information or data you want to share to the group or items to discuss? (information on specific pollutants, specific pathways or models you use, comments on the paper)**

**The Danish EPA is currently awaiting the final versions of two nationally funded reports concerning**

- 1) Determination of background concentrations and,**
- 2) Quantification of the emissions of a number of substances from diffuse sources.**

**The reports are written in Danish but an English summary could be provided for the group in order to share information on the applied methods.**
