UWWTD reporting in CDR 11th reporting call under the UWWTD data preparation and reporting process

Main steps of UWWTD reporting

Data preparation

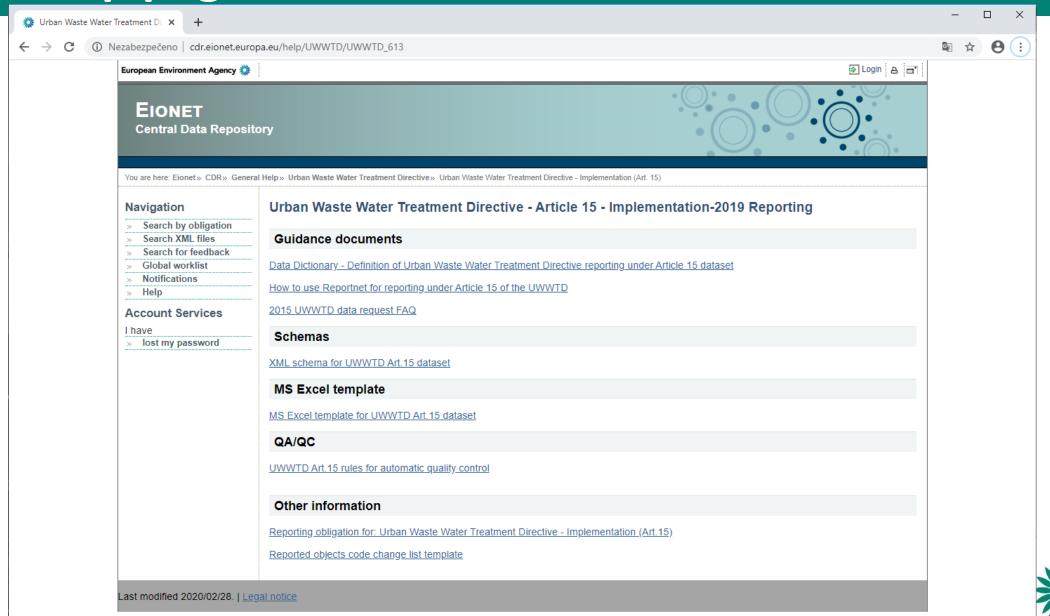

CDR help pages for Art.15 and Art. 17

http://cdr.eionet.europa.eu/help/UWWTD/UWWTD 613 http://cdr.eionet.europa.eu/help/UWWTD/UWWTD 524

- Data Dictionary instructions
- Use 2019 xls (xsd) templates
- 2019 update of QA rules
- Other documents
- -> fill the templates for both articles with your data

CDR help pages

Reporting process – authorised reporters

- Data can be reported by authorised reporters only
- Each nominated reporter has to be approved by "WISE – National reporting coodinator" for given country
- Nomination of the new reporter: send the request to the e-mail address <u>uwwtd.helpdesk@eionet.europa.eu</u> (copy to your "WISE – National reporting coodinator")
- As soon as the new reporter is added to the list of UWWTD country reporters on EIONET, appropriate access rights are granted

Reporting process – data upload on CDR

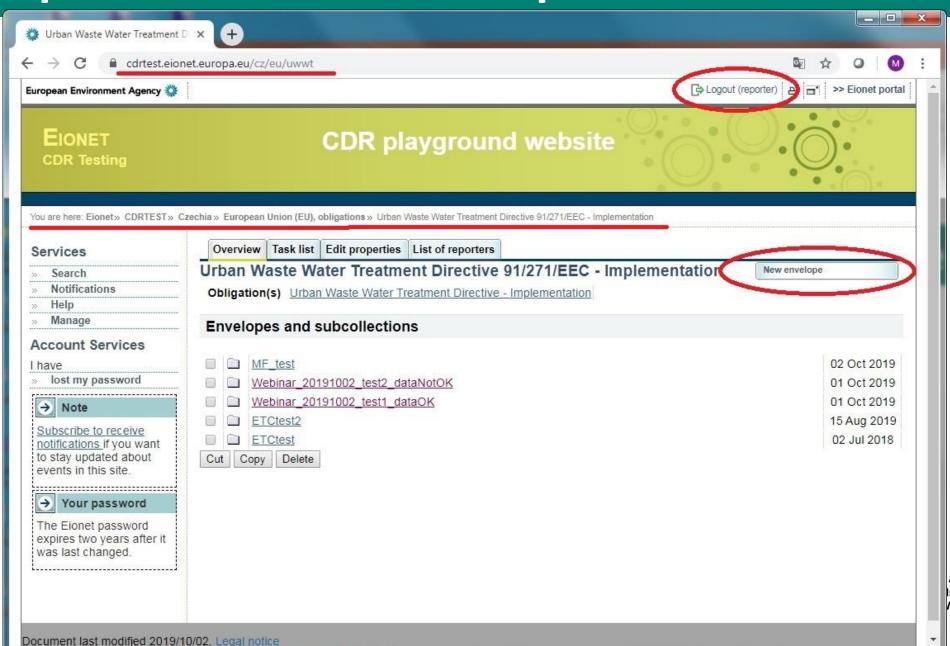

- cdr.eionet.europa.eu/{cc} ({cc} = country code)
 (cdrtest.eionet.europa.eu/{cc} => e.g. cdrtest.eionet.europa.eu/cz)
- Login (upper right corner)
- -> EU obligations folder
- -> Art. 15: Urban Waste Water Treatment Directive 91/271/EEC Implementation
- -> Art. 17: Urban Waste Water Treatment Directive 91/271/EEC National Implementation Programme

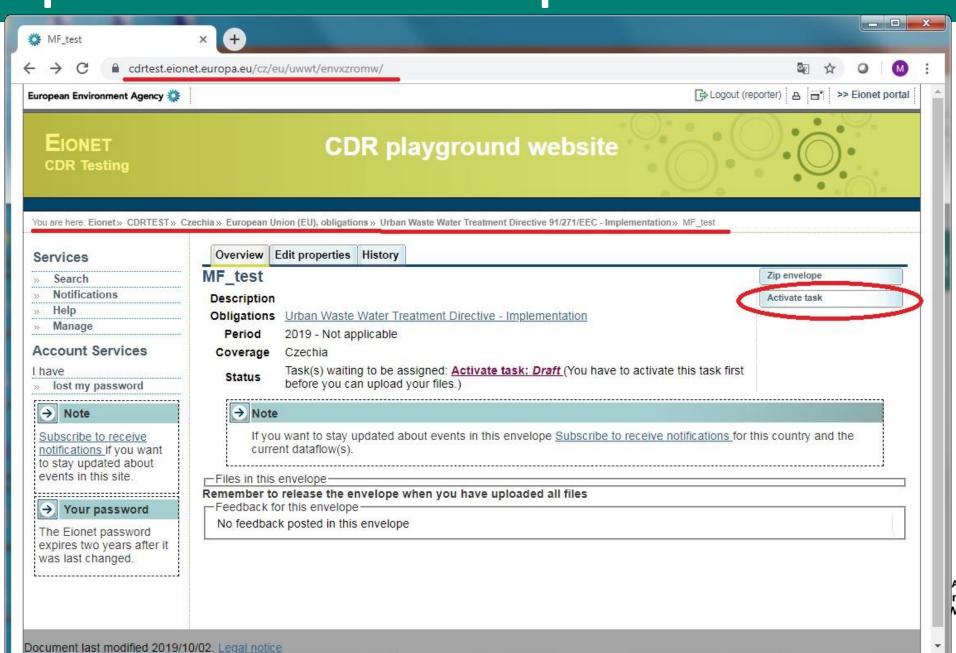

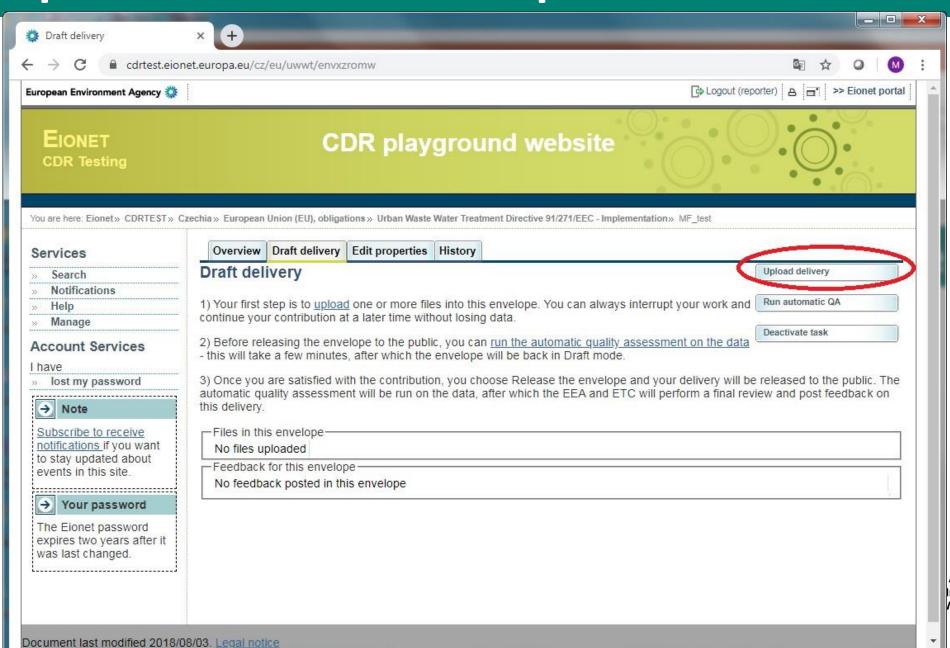

Reporting process – data upload on CDR (2)

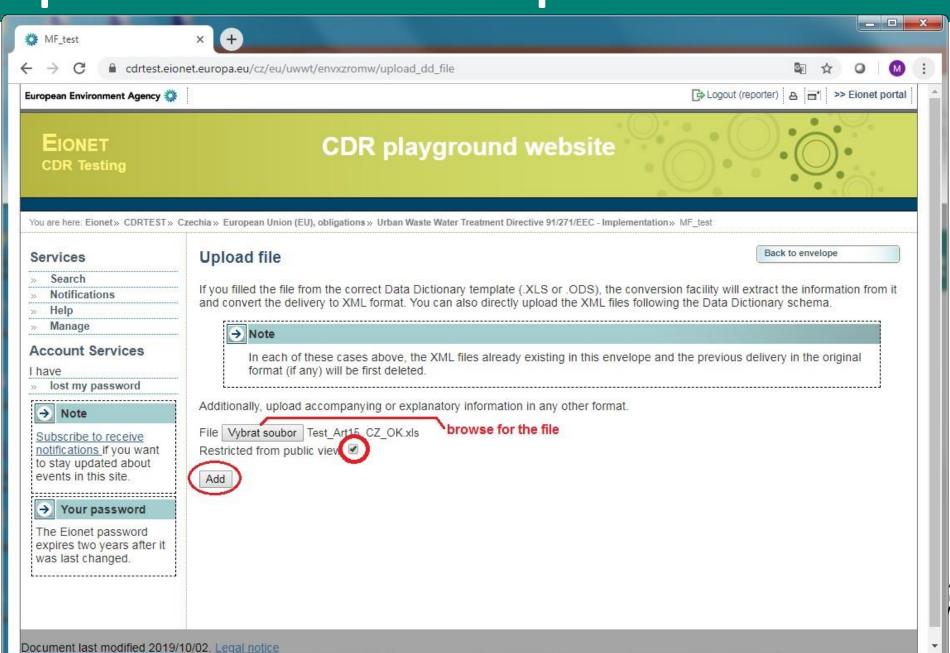

- Create new envelope (use easily understandable title)
- Open the envelope
- Activate task
- Browse for template filled with the data
- Upload the data file (possible to restrict from public view)
- xls file is automatically converted to xml during upload

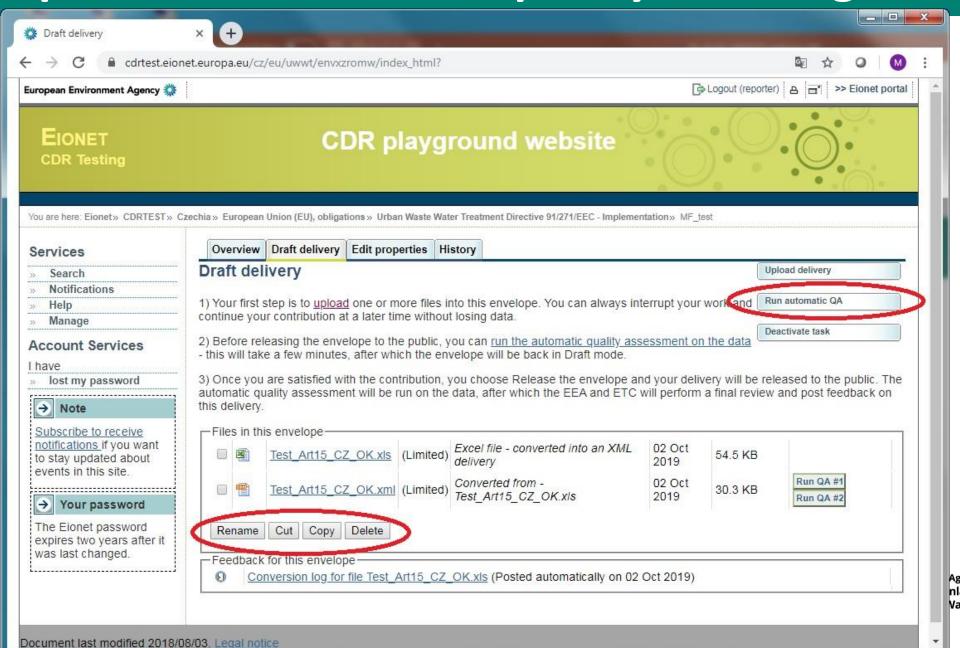

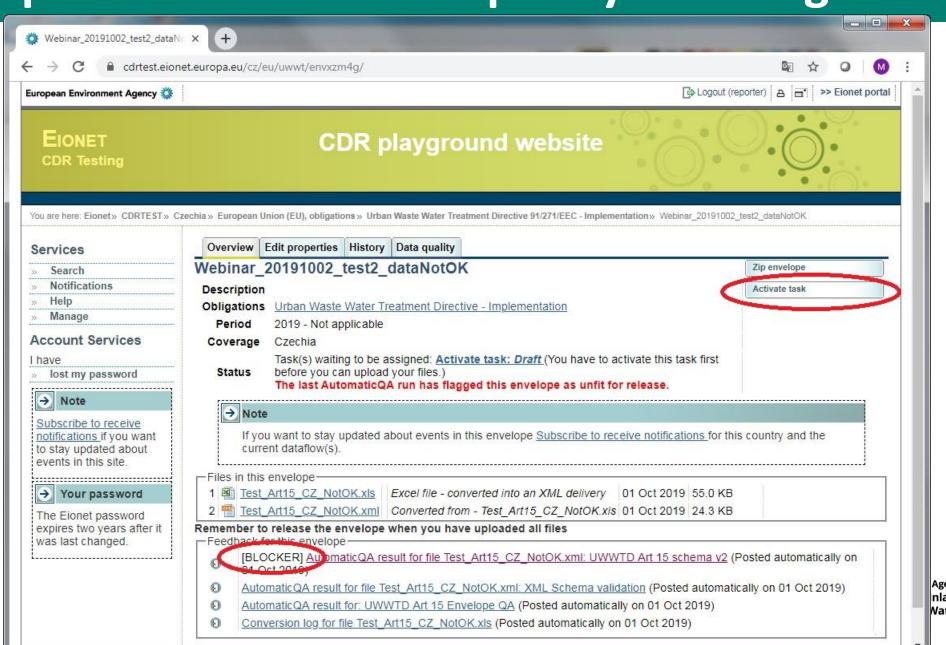

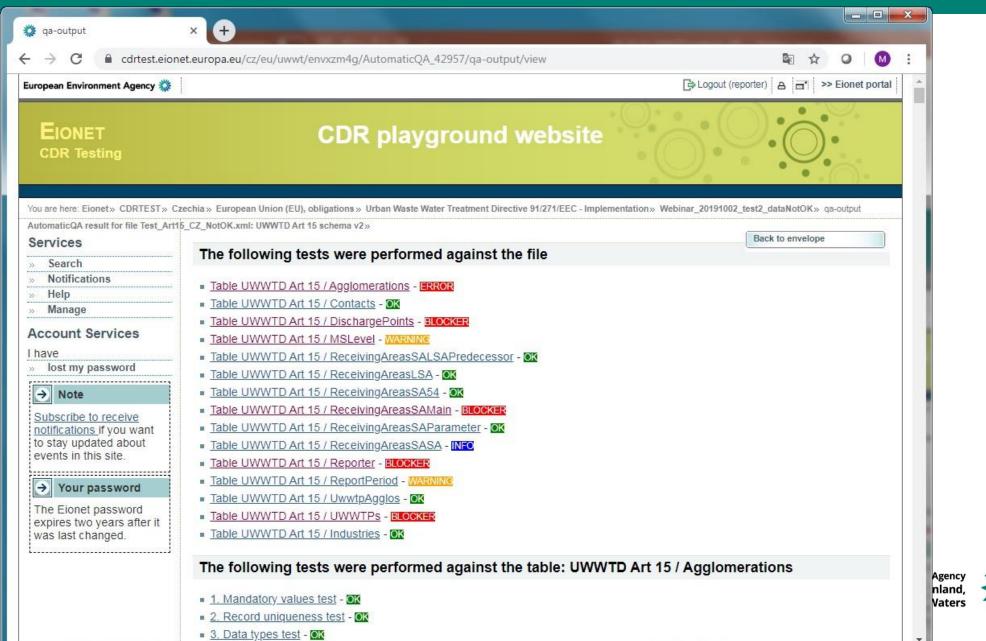

Reporting process – data quality checking

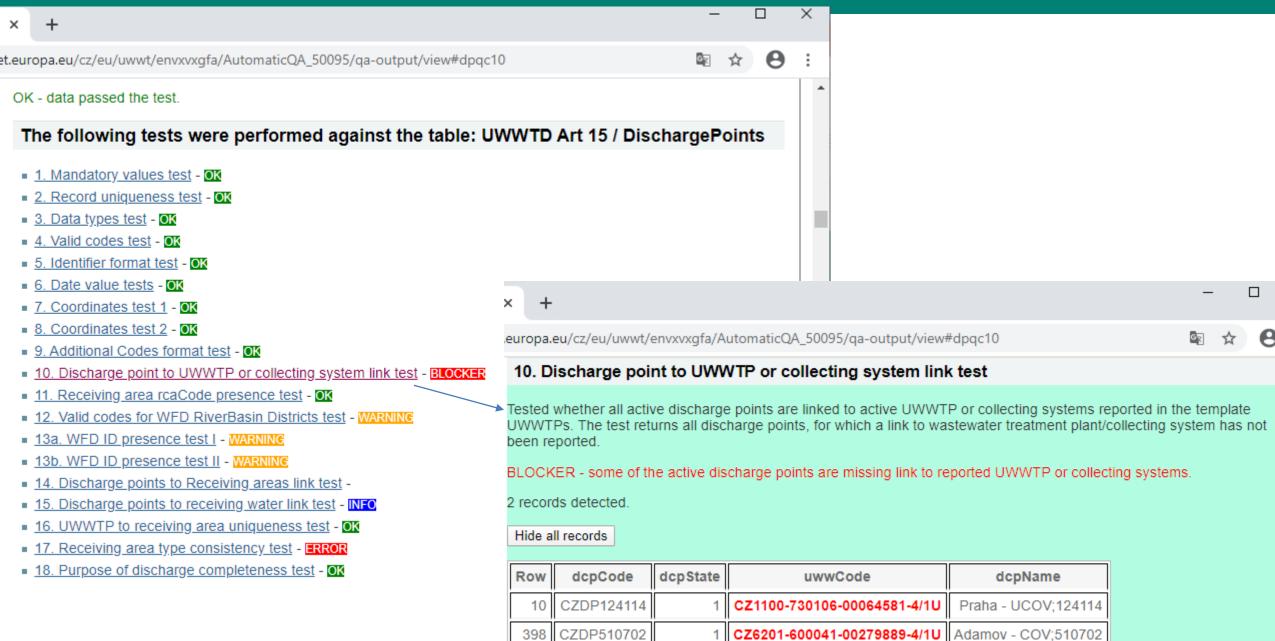

- Quality checking: "Run automatic QA" button
- Check the results
- 4 levels of QA outputs: blocker, error, warning, info
- Correct data if necessary
- Delete the data files containing errors from the envelope, Re-upload the corrected data
- Repeat quality checking

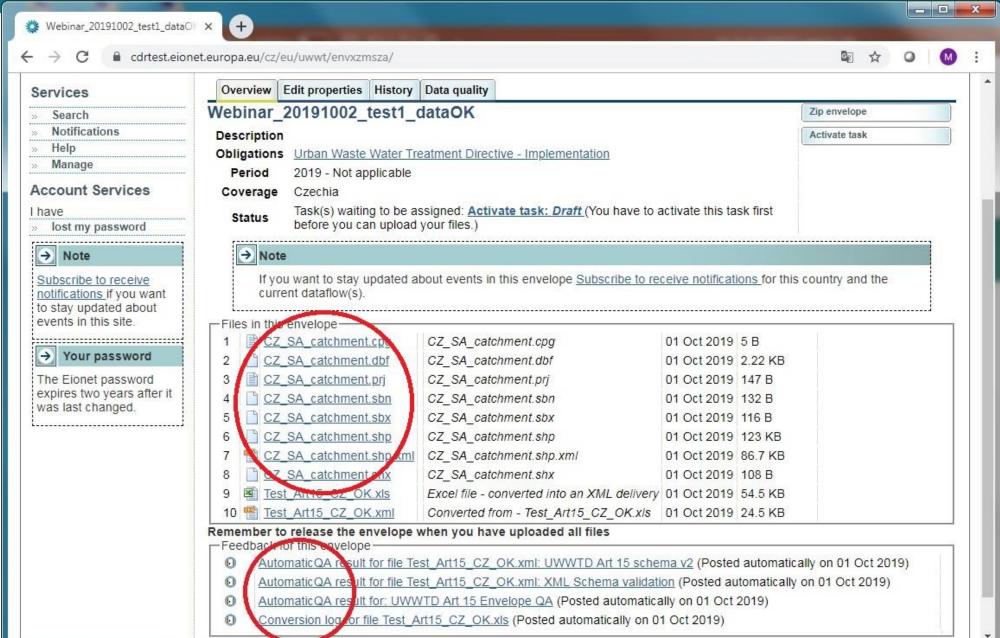

Data upload on CDR - quality checking OK, spatial data

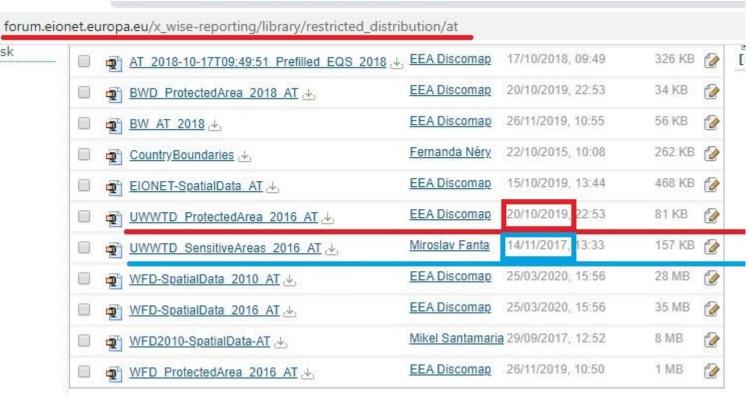

Reporting process – spatial data templates

"Reporting under the WISE Water Directives and WISE Soe" interest group on EIONET Forum

-> WISE restricted access area -> Login -> country folder (AT, CZ, ..)

"WFD-like" data structure, output of 10th reporting, uploaded in Oct. 2019, template for 11th (= current) reporting

"Pre-existing" UWWTD spatial data structure, output of 9th reporting, uploaded in Nov. 2017, template for 10th reporting

European Environment Agency European Topic Centre on Inland,

Coastal and Marine Water

Reporting process – spatial data – WFD-like structure

```
WFD-like template "UWWTD_ProtectedArea_2016_{CC}.zip"
contains shapefiles: ProtectedArea (polygon data)

ProtectedAreaLine (line data)

(ProtectedAreaPoint)
```

attributes important for data selection in these shapefiles:

spZoneType

```
polygons: catchmentOfSensitiveArea, lakeSensitiveArea, coastalSensitiveArea, transitionalSensitiveArea, lessSensitiveArea, (riverSensitiveArea)
```

lines: riverSensitiveArea, coastalSensitiveArea, lessSensitiveArea

statusCode

```
selection of currently valid data:

statusCode in ('valid', 'stable', 'experimental')

resp.

(statusCode = 'valid' OR statusCode = 'stable' OR statusCode = 'experimental')
```

Reporting process – spatial data – pre-existing UWWTD structure

Each delivered shapefile / feature class contains one type of sensitive area

- catchment (polygons)
- coast area (polygons)
- coastline (lines)
- lake (polygons)
- river (lines)
- transitional water (polygons)

resp. one type of less sensitive area

- coast area (polygons)
- coastline (lines)
- transitional water (polygons)

Reporting process – spatial data – use of the template

- Select currently valid data from the template
- Update them if necessary
- Ensure consistency of identifiers of spatial objects (receiving / sensitive areas) available in spatial and tabular data
- Keep proper data specification (spZoneType: rivers / lakes / TW / coastL / coastA / catchments / ...) and data type (lines / polygons) as requested
- Upload your updated spatial data to the Art. 15 envelope
- Preferred structure: follow the the WFD-like template and shapefile names
- Accepted as well: the "pre-existing" UWWTD structure: individual shapefiles / feature classes divided by type of sensitive area

 [Less sensitive area]

Reporting process – spatial data – naming conventions

WFD-like structure:

use the shapefile names ProtectedArea, ProtectedAreaLine, (ProtectedAreaPoint) zip all shapefiles to the file UWWTD_ProtectedArea_2018_{CC}.zip (e.g. UWWTD_ProtectedArea_2018_AT.zip)

"pre-existing" UWWTD structure: shapefile or feature classes names:

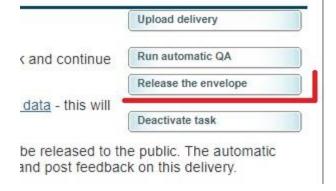

- {CC}_SA_catchment (e.g. AT_SA_catchment) (polygons)
- {CC}_SA_coastA (polygons)
- {CC}_SA_coastL (lines)
- {CC}_SA_lake (polygons)
- {CC}_SA_river (lines)
- {CC}_SA_TW (polygons)
- {CC} LSA coastA (polygons)
- {CC} LSA coastL (lines)
- {CC}_LSA_TW (polygons)

Reporting process – final step

No blockers (if possible, no errors as well) -> Release the

envelope)

after that, the quality control process is automatically repeated once more

- Contact UWWTD helpdesk in case of any problems
 (<u>uwwtd.helpdesk@eionet.europa.eu</u> afterwards, the issue is managed
 through OTRS system)
- EIONET helpdesk also available (e.g. EIONET account problems helpdesk@eionet.europa.eu)
